CAMBRIDGE LOCAL EXAMINATIONS, 1909.

AN Examination of Senior and Junior Candidates, in accordance with the Regulations of the Revised Code, will be held at Colombo, Kandy, Galle, Jaffna, and Batticaloa, on December 13, 1909, and the following days.

2. Forms of entry duly filled up should be forwarded so as to reach the Director of Public Instruction not later than 2 P.M. on Tuesday, August 3, 1909, together with the following fees, which should be paid as follows :—

(1) A Bank Draft on England payable to Dr. J. N. Keynes, crossed "Barclay & Co.," at the rate of £1 for each candidate, as the Cambridge fee.

N.B.—The fees should not under any circumstances be remitted by Money Order. *No cash or Money Order, Bank Draft, or cheque, in favour of the Director of Public Instruction will be accepted.*

(2) A Post Office Order (not Postal Order), Bank Draft, or crossed cheque in my favour at the rate of Rs. 2.50 for each candidate, as the local expenses fee. *Cash will not be accepted.*

N.B.—Forms of entry will be accepted from August 4 to August 11 inclusive on payment of an extra fee of Rs. 5.

All entry forms received at the Public Instruction Office not accompanied by the Cambridge and local fees, as well as the proper birth certificate where one is required, will be immediately returned to the sender.

3. Forms of entry may be had from the Director in the second week in July. It is requested that Managers will only apply for such number of forms as they actually require, and that they will not encourage any student to enter as a candidate unless they are satisfied that he has a fair chance of passing the examination.

It is also requested that Principals of Schools will check the entry forms of their candidates and see that the instructions of the Syndicate with regard to the filling up of the forms are complied with. *The date of birth should be carefully verified, and the candidates' full names must be given without any initials.*

4. Applications for entry forms should be made from the first week in July, 1909, stating what kinds of entry forms (C, D, E, or F) and the number of forms of each kind are required.

5. Religious Knowledge, as a subject of examination, is not necessary for Colonial Students, and no grant or award under the Revised Code will be made directly or indirectly dependent on marks gained for Religious Knowledge.

6. All under-age candidates must forward with their entry forms certificates of the registration of their birth, unless such a certificate has been sent to this office for a previous examination. Those who have already forwarded certificates of birth for a previous examination *should mention the year, the examination for which they forwarded the certificates, and the centre at which they appeared for the examination.* Affidavits will not be accepted *under any circumstances.*

If the name appearing in the birth register differs, either by alteration or addition, from the name by which the candidate is known, the parent or guardian should, before obtaining a certificate, apply to the Registrar-General or his Assistant for such alteration in the manner set forth in section 7 of Ordinance No. 23 of 1900.

A certificate of baptism should be a proper extract of the Baptismal Register, *i.e.*, an exact copy of the entry of the register should be made, and at the foot of the copy the incumbent of the Church issuing it should certify to its correctness.

Principals of Schools should examine carefully all certificates of birth or baptism, and should not forward any certificate which is not a proper and reliable document.

7. Private students will only be admitted as under-age candidates if they forward, along with their entry form, a written statement from an Inspector of Schools that their certificate of birth or baptism is a reliable document.

N.B.—Baptismal certificates will only be accepted if the candidate's baptism was within four months of his date of birth; otherwise he will not be allowed to compete for Prizes and Scholarships.

Candidates will not be allowed to present themselves as private students if they are actually pupils of any school or college.

Private students will not be admitted to the examinations unless they produce a certificate from some responsible person to the effect that they have a reasonable chance of passing the examination.

8. Fees cannot be returned. If notice of withdrawal is received by the Local Secretary more than sixteen days before the commencement of the examination, a voucher will be sent, which will enable the student to enter in another year without further fee to the University, subject to the usual conditions of age. The Syndicate do not undertake to grant a similar voucher in any case in which the full sixteen days' notice has not been given. Applications made within sixteen days of the examination will, however, be considered if accompanied by a certificate from a qualified doctor stating that the candidate is physically unfit to take the examination. No applications received after the commencement of the examination can be considered. Students holding vouchers must apply for fresh forms of entry and return them to Local Secretaries on or before August 3 in the year in which they wish to be examined together with the local expenses fee of Rs. 2.50 (*vide* section 2 of clause 2).

N.B.—(1) The Mathematical Prize will be awarded on the results of the Cambridge Senior Local Examination of December, 1909, to the candidate under 19 years of age who passes the best examination in the subjects of section 10.

(2) A prize of the value of Rs. 100 in books, presented by Don Carolis Hewavitarana, Mudaliyar, entitled the "Hewavitarana Science Prize," will be awarded on the results of the Junior Local Examination to the candidate under 16 years of age who passes the best examination in the subjects of section 11 "Elementary Experimental Science."

Office of the Director of Public Instruction,
Colombo, July 29, 1908.

Such consent will not be given unless the alternative proposed in lieu of that prescribed is, in the opinion of the Syndicate, suitable and of equivalent length and difficulty. Any application made in accordance with this announcement must reach the General Secretary not later than April 1 for the ensuing December Examination. A fee, to cover the extra expense involved, will be payable by the School authorities for each special paper that has to be prepared.

EXAMINATION IN SPOKEN FRENCH AND SPOKEN GERMAN.

The Syndicate will arrange for the examination of candidates in Spoken French and Spoken German at Schools at which the authorities are prepared to pay a fee of half-a-crown for each candidate examined in each language (the minimum payable by any School being £1 for each language), together with the travelling expenses and the hotel expenses (if any) of the Examiner or Examiners.

Applications must reach the General Secretary not later than October 3, and the examination will be held at some time, before the commencement of the Local Examinations, to be fixed by the Syndicate.

Candidates entering for the Spoken Examination in either language must also enter for the Written Examination in the same language, and if they pass therein and also in the Spoken Examination, the fact of their having satisfied the Examiners in the Spoken Examination will be endorsed on their Certificate.

The Spoken Examination will not be necessary for passing in the language or for the mark of distinction; it will, however, be taken into account in determining the position of candidates in the general Class list, and it will be counted towards the mark of distinction in cases where the mark of distinction would not be obtained without it.

In the Junior and Senior Examinations, candidates will be required (1) to read aloud a passage of French or German; (2) to write a passage of French or German from dictation; (3) to hold a short conversation in French or German with the Examiner.

Division of straight lines into parts in any given proportion. Constructions of a fourth proportional to three given straight lines, and of a mean proportional to two given straight lines. Division of straight lines in extreme and mean ratio. Division of a straight line internally or externally into segments so that the rectangle under the parts is equal to a given square. Construction of regular polygons in and about circles. Construction of a circle from sufficient data of the following character:—(1) radius given, (2) point on the circle given, (3) contact with a given straight line or circle, (4) contact with a given straight line at a given point. In dealing with proportion it may be assumed that all magnitudes of the same kind can be treated as commensurable.

GEOMETRY FOR SENIORS.

The paper in Geometry will contain questions on Practical and on Theoretical Geometry. Every candidate will be expected to answer questions in both branches of the subject.

The questions on Practical Geometry will be set on the constructions contained in the annexed Schedule A, together with easy extensions of them. In cases where the validity of a construction is not obvious, the reasoning by which it is justified may be required. Every candidate must provide himself with a ruler graduated in inches and tenths of an inch, and in centimetres and millimetres, a set square, a protractor, compasses, and a fairly hard pencil. All figures must be drawn accurately and distinctly. Questions may be set in which the use of the set square or of the protractor is forbidden.

The questions on Theoretical Geometry will consist of theorems contained in the annexed Schedule B, together with questions upon these theorems, easy deductions from them, and arithmetical illustrations. Any proof of a Proposition will be accepted which appears to the Examiners to form part of a systematic treatment of the subject; the order in which the theorems are stated in Schedule B is not imposed as a sequence of their treatment.

In the proof of theorems and deductions from them, the use of hypothetical constructions will be permitted. Proofs which are only applicable to commensurable magnitudes will be accepted.

SCHEDULE A.

Bisection of angles and of straight lines.
 Construction of perpendiculars to straight lines.
 Construction of an angle equal to a given angle.
 Construction of parallels to a given straight line.
 Simple cases of the construction from sufficient data of triangles and quadrilaterals.
 Division of straight lines into a given number of equal parts or into parts in any given proportions.
 Construction of a triangle equal in area to a given polygon.
 Construction of tangents to a circle and of common tangents to two circles.
 Simple cases of the construction of circles from sufficient data.
 Construction of a fourth proportional to three given straight lines and a mean proportional to two given straight lines.
 Construction of regular figures of 3, 4, 6, or 8 sides in or about a given circle.
 Construction of a square equal in area to a given polygon.

SCHEDULE B.

Angles at a Point.

If a straight line stands on another straight line, the sum of the two angles so formed is equal to two right angles; and the converse,
 If two straight lines intersect, the vertically opposite angles are equal.

Parallel Straight Lines.

When a straight line cuts two other straight lines, if (i) a pair of alternate angles are equal, or (ii) a pair of corresponding angles are equal, or (iii) a pair of interior angles on the same side of the cutting line are together equal to two right angles, then the two straight lines are parallel; and the converse.
 Straight lines which are parallel to the same straight line are parallel to one another.

Triangles and Rectilinear Figures.

The sum of the angles of a triangle is equal to two right angles.
 If the sides of a convex polygon are produced in order, the sum of the angles so formed is equal to four right angles.
 If two triangles have two sides of the one equal to two sides of the other, each to each, and also the angles contained by those sides, equal, the triangles are congruent.
 If two triangles have two angles of the one equal to two angles of the other, each to each, and also one side of the one equal to the corresponding side of the other, the triangles are congruent.
 If two sides of a triangle are equal, the angles opposite to these sides are equal; and the converse.
 If two triangles have the three sides of the one equal to the three sides of the other, each to each, the triangles are congruent.
 If two right-angled triangles have their hypotenuses equal, and one side of the one equal to one side of the other, the triangles are congruent.
 If two sides of a triangle are unequal, the greater side has the greater angle opposite to it; and the converse.

Of all the straight lines that can be drawn to a given straight line from a given point outside it, the perpendicular is the shortest.

The opposite sides and angles of a parallelogram are equal, each diagonal bisects the parallelogram, and the diagonals bisect one another.

If there are three or more parallel straight lines, and the intercepts made by them on any straight line that cuts them are equal, then the corresponding intercepts on any other straight line that cuts them are also equal.

Areas.

Parallelogram on the same or equal bases and of the same altitude are equal in area.

Triangles on the same or equal bases and of the same altitude are equal in area.

Equal triangles on the same or equal bases are of the same altitude.

Illustrations and explanations of the geometrical theorems corresponding to the following algebraical identities:—

$$\begin{aligned}
 k(a + b + c + \dots) &= ka + kb + kc + \dots, \\
 (a + b)^2 &= a^2 + 2ab + b^2, \\
 (a - b)^2 &= a^2 - 2ab + b^2, \\
 a^2 - b^2 &= (a + b)(a - b).
 \end{aligned}$$

The square on a side of a triangle is greater than, equal to, or less than the sum of the squares on the other two sides, according as the angle contained by those sides is obtuse, right, or acute. The differences in the cases of inequality is twice the rectangle contained by one of the two sides and the projection on it of the other.

Loci.

The locus of a point which is equidistant from two fixed points is the perpendicular bisector of the straight line joining the two fixed points.

The locus of a point which is equidistant from two intersecting straight lines consists of the pair of straight lines which bisect the angles between the two given lines.

The Circle.

A straight line drawn from the centre of a circle to bisect a chord which is not a diameter, is at right angles to the chord; conversely, the perpendicular to a chord from the centre bisects the chord.

There is one circle, and one only, which passes through three given points not in a straight line.

In equal circles (or, in the same circle) (i) if two arcs subtend equal angles at the centres, they are equal; (ii) conversely, if two arcs are equal they subtend equal angles at the centre.

In equal circles (or, in the same circle) (i) if two chords are equal, they cut off equal arcs; (ii) conversely, if two arcs are equal, the chords of the arcs are equal.

Equal chords of a circle are equidistant from the centre; and the converse.

The tangent at any point of a circle and the radius through the point are perpendicular to one another.

If two circles touch, the point of contact lies on the straight line through the centres.

The angle which an arc of a circle subtends at the centre is double that which it subtends at any point on the remaining part of the circumference.

Angles in the same segment of a circle are equal; and, if the line joining two points subtends equal angles at two other points on the same side of it, the four points lie on a circle.

The angle in a semicircle is a right angle; the angle in a segment greater than a semicircle is less than a right angle; and the angle in a segment less than a semicircle is greater than a right angle.

The opposite angles of any quadrilateral inscribed in a circle are supplementary; and the converse.

If a straight line touch a circle, and from the point of contact a chord be drawn, the angles which this chord makes with the tangent are equal to the angles in the alternate segments.

If two chords of a circle intersect either inside or outside the circle the rectangle contained by the parts of the one is equal to the rectangle contained by the parts of the other.

Proportion: Similar Triangles.

If a straight line is drawn parallel to one side of a triangle, the other two sides are divided proportionally and the converse.

If two triangles are equiangular their corresponding sides are proportional; and the converse.

If two triangles have one angle of the one equal to one angle of the other and the sides about these equal angles proportional, the triangles are similar.

The internal bisector of an angle of a triangle divides the opposite side internally in the ratio of the sides containing the angle, and likewise the external bisector externally.

The ratio of the areas of similar triangles is equal to the ratio of the squares on corresponding sides.

For candidates for Honours questions will also be set relating to other properties of triangles and circles, and to the Elementary Geometry of the plane and the sphere.
