TO

# The Ceylon Government Gazette.

No. 5,215—FRIDAY, APRIL 28, 1893.

## VITAL STATISTICS OF CEYLON.

REPORT OF THE REGISTRAR-GENERAL FOR THE FOURTH QUARTER OF 1892.

### I.—Population.

THE estimated population of the Island on the last day of each quarter in the year was as follows:—

March 31, 1892	... 3,057,756*	September 30, 1892	... 3,110,111*
June 30, 1892	... 3,092,804*	December 31, 1892	... 3,119,979*

2. *Increase of Population.*—The total increase of population this quarter was 9,868, of which 3,553, or 36 per cent., was due to excess of births over deaths, and 6,315, or 64 per cent., to excess of arrivals over departures of Indian coolies. The increase in the third quarter was nearly double the number this quarter, and in the second quarter the increase was double that of the third quarter, while in the first quarter there was a decrease in the population of 5,071 persons. The growth of population in each quarter of 1892 with its causes is shown in the following table:—

TABLE A.—Growth of Population in each Quarter of 1892, and its Causes.

	Births.	Deaths.	Excess or Deficit of Births over Deaths.	Arrivals of Immigrant Coolies.	Departures of Immigrant Coolies.	Excess or Deficit of Arrivals over Departures.	Total Increase or Decrease in the Quarter.	Population at the end of each Quarter.
First Quarter	... 22,305	26,615	— 4,310	19,526	20,287	— 761	— 5,071	3,057,756
Second Quarter	... 23,211	19,558	3,653	49,789	18,394	31,395	35,048	3,092,804
Third Quarter	... 23,606	18,206	5,400	27,097	15,192	11,907	17,307	3,110,111
Fourth Quarter	... 24,111	20,558	3,553	20,058	13,743	6,315	9,868	3,119,979

3. Table I. in the appendix gives the estimated population, area, number of marriages, births (legitimate and illegitimate, male and female), deaths (male and female) for every province and district in the Island.

### II.—Marriages.

4. *Marriages.*—The number of general marriages—*i.e.*, marriages other than Kandyan or Mohammedan—registered in this quarter was 4,176, and of Kandyan marriages 1,168.

Table III. in the appendix shows the marriages solemnised among the general community in every province and district of the Island, the civil condition, nationality, the highest, lowest, and mean ages of the parties, the mode of solemnisation, the number of bridegrooms and brides who were unable to sign their names in the registers, &c.

Table IV. gives similar information in respect of Kandyans.

5. *First Marriages : Re-marriages.*—Of the 4,176 general marriages, 3,663 (equal to 88 per cent.) were between bachelors and spinsters, 106 between bachelors and widows, 333 between widowers and spinsters, 68 between widowers and widows, 4 between divorced men and spinsters, and 2 between divorced women and widowers. Of the 1,168 Kandyan marriages, 939 (equal to 80 per cent.) were between bachelors and spinsters; 47 between bachelors and widows, 112 between widowers and spinsters, 36 between widowers and widows, 21 between divorced men and spinsters, 1 between a divorced man and a widow, 8 between divorced women and bachelors, 2 between divorced women and widowers, and 2 between divorced men and divorced women.

6. *Age at Marriage.*—The mean age at marriage for the general community was 27·9 for males and 19·2 for females; and for the Kandyans, 27·3 for males and 20·8 for females.

7. *Minors.*—In the general community 5·4 per cent. of the bridegrooms and 70·1 per cent. of the brides were under 21; and amongst the Kandyans 14·7 per cent. of the bridegrooms and 68·5 per cent. of the brides were under 21.

8. *Mixed Marriages.*—There were 24 mixed marriages in the quarter: 3 between Europeans and Burghers, 2 between Europeans and Sighalese, 8 between Burghers and Sighalese, 1 between a Burgher and a Tamil, 7 between Sighalese and Tamils, and 3 other mixed marriages.

9. *Signatures in the Marriage Registers.*—Of the 8,352 persons married among the general community this quarter, 1,055 men and 3,370 women signed the register with marks, that is to say, 74 per cent. of the men and 19 per cent. of the women were able to write their names. Of the 2,336 persons married among the Kandyans, 449 men and 1,135 women signed the register with marks, or, in other words, 62 per cent. of the men and about 3 per cent. of the women were able to write their names.

\* These figures are the revised estimates of the population of the Island for these quarters, allowance being made for the revision made in September last by the Census Commissioner of his original Estimate of the population on the night of February 26, 1891, and for the mistake of the Customs Department, rectified last January, in publishing the cooly arrivals of May last in the *Government Gazette* as 12,291 instead of 21,291.

### III.—Births and Deaths.

10. *Births.*—The births registered in the quarter numbered 24,111, and were in the proportion of 31·8 to 1,000 persons living, as against 31·1, the average of the corresponding period for the ten years 1881–90, and 31·0, the rate in the fourth quarter of last year.

11. *Deaths.*—The deaths registered in the quarter amounted to 20,558, including 19 Europeans, 51 Burghers, 13,734 Singhalese, 4,980 Tamils, 1,702 Moors, 50 Malays, and 22 others, and corresponded to an annual rate of 27·1 per 1,000.

12. The *Births and Deaths and their Rates* in this quarter are compared in the following statement with the results obtained in the previous quarters of the year, the fourth quarter of the past year, and the average of the corresponding quarter for the ten years 1881–90:—

TABLE B.

	Births.	Deaths.	Per Mille per Annum.	Birth-rate.	Death-rate.
Average of ten fourth quarters in 1881–90 ...	22,592	16,471	31·1	... 23·3	
Fourth quarter of 1891 ...	23,546	21,004	31·0	... 27·8	
First quarter of 1892* ...	22,305	26,615	29·8	... 35·6	
Second quarter of 1892 ...	23,211	19,558	31·0	... 26·1	
Third quarter of 1892* ...	23,606	18,206	31·1	... 24·1	
Fourth quarter of 1892 ...	24,111	20,558	31·8	... 27·1	

13. It will thus appear that while the birth-rate of the Island in the quarter was about the average, the death-rate rose 16 per cent. above the average (23·3), and higher than in the two immediately preceding quarters.

14. Table II. in the appendix gives similar information to Table B in respect of each Province and district in the Island. Table I. gives the births and deaths according to sex, and births according to legitimacy; Table V. the births according to nationality and sex; and Table VI. the deaths for each month of the quarter according to nationality for every Province and district. The causes of death for every Province and district are shown in Table VII., and for the town of Colombo in Table VIII. Table IX. shows the period of life at which the deaths of the various races occurred in every district.

15. *Age at Death.*—Of the 20,558 deaths registered in the Island this quarter, 4,156, equal to 20 per cent. of the total deaths, occurred under one year; 8,035, or 39 per cent., under 5 years; 35 persons are reported to have been centenarians, and 1,032 persons to have died at various ages between 75 and 100.

16. *Sex.*—Of the total number of births (24,111), 12,541 were males and 11,570 were females, i.e. 108 males to 100 females. Of the total number of deaths (20,558), 10,592 were males and 9,966 were females. Out of equal numbers living of each sex there died 94 males to 100 females.

### IV.—Health of the Districts.

17. The general health of the population of the Island in the quarter has been worse than in the preceding quarters, except the first, which is usually the unhealthiest period of the year, and the mortality was at the rate of 27·1 a rate almost the same as in the corresponding period of last year (27·8) and of 1884 (27·4)—the two unhealthiest fourth quarters since 1881—and 16 per cent. above the mean rate of the period in 1881–90 (23·3). The increase of mortality in the quarter over the average of the corresponding period in 1881–90 is almost exclusively confined, as will be seen from the annexed statement, to the districts lying in what Mr. Vincent (in his report on the Forest Administration of Ceylon) calls the moist zone of the Island (i.e., the region having 60 inches of rainfall and over), while the districts in the dry zone (i.e. the region with less than 60 inches of rainfall) show death-rates more or less equal to the average, and some districts even rates below the average.

TABLE C.—Death-rate for each Quarter in the various Districts of the Moist and Dry Zone of the Island.

District.	Death-rate per Mille per Annum.							
	Average of Ten previous Quarters, 1881–90.				1892.

Hambantota	33·0	23·3	23·8	26·7	52·2	22·8	20·4	27·1
Baticaloa	32·4	31·2	25·8	25·3	49·6	43·2	28·4	25·6
Trincomalee	39·3	38·3	26·9	29·9	45·7	37·3	27·6	28·2
Puttalam and Chilaw	32·0	24·7	21·6	19·8	37·8	21·4	18·4	22·7
Anurádhapura	52·9	39·0	31·6	33·6	76·9	72·1	39·7	35·8

\* These figures are slightly below those shown in the reports of the first and third quarters, the difference being due to the discovery, since the publication of the reports, of 28 and 33 deaths respectively having been added twice by mistake.

18. Usually the first quarter, as I have said, is the unhealthiest period in the year, and the death-rate in that quarter in the last twelve years, for which the rates are available, has been in excess of the succeeding quarters, save in the years 1884, 1887, and 1890. Examining the quarterly rates of mortality in the several districts of the Island, it will be noticed that the districts in the wet zone have more or less a uniform rate for all the quarters of the year, while the districts in the dry zone show a higher mortality for the first quarter than for the succeeding quarters. The unhealthiness of the Island in the first quarter is chiefly due, therefore, to the unhealthiness of the dry zone districts in that quarter, which is probably due to the extreme variation of temperature. In the second quarter the mortality of the dry zone districts declines by 25 per cent. from the rate in the first quarter. In Jaffna the rate fell to 20·7 from 27·7, in Mannar from 57·2 to 46·8, in the Mullaithivu and Vavuniya Districts from 46·5 to 37·9, in Hambantota from 33·0 to 23·3, in Anuradhapura from 52·9 to 39·0. In the Batticaloa and Trincomalee Districts the decline in the mortality was, however, not so considerable. The reason probably is that the south-west monsoon comes as a hot land wind in the Eastern Province relieved of its moisture by the ranges of hills in the Central Province, but in the Hambantota District and from Puttalam northward it comes direct from the sea, and, though bringing no rain with it, has a healthy effect. In the third quarter the average death-rate declines further in the dry zone districts, but rises in the fourth quarter (the wet period in the dry zone district), except in the Puttalam and Batticaloa Districts. The healthiness of Batticaloa in the last quarter of the year is probably due to the fresh north-east sea breezes it then receives, but I am unable to account for the healthiness of the Puttalam and Chilaw Districts in that quarter, except it be that the Chilaw District south of Mâdampé being in the wet zone is healthy then, and its rate affects the rate of the rest of the district which is north of Mâdampé and is unhealthy.

19. The following tables show the birth and death-rates in the several districts of the Island and in the subdivisions of those districts for each quarter of the last two years 1891-92. The rates shown are for the Singhalese only in the Singhalese districts and for the Tamils only in the Tamil districts. These separate rates furnish more trustworthy data for comparing the relative sanitary condition of those districts and divisions of the Island than if the rates included other nationalities temporarily resident in them. In the Puttalam District, where the Singhalese and Mohammedans are found in almost equal proportion, and in the Batticaloa District, where Tamils and Mohammedans are almost in equal proportion, the rates of the different sections of the population as well as of all the races are given:—

TABLE D.—Singhalese Birth and Death-rates in Singhalese Districts.

20. In the last quarter's report (to which reference is requested) the relative sanitary condition of the population in the various revenue subdivisions of the Island, except the divisions of Kégalla and Badulla Districts, has been discussed, and as the statistics of this quarter do not alter the conclusions of that report as to the position of the divisions in regard to their health condition, I confine my remarks in this report to the two districts not yet noticed.

21. *Badulla District*.—The mortality in the District of Badulla (a sparsely populated district with a population of 50 to a square mile, as against 29·5 in the Kandy District and 83 in the Mátalé District) was 39·4 this quarter, being 21 per cent. above the mean rate for the period in 1881-90. Of the revenue divisions in this district the hilly divisions (leaving out the Local Board division of Badulla, which contains a small population with very fluctuating rates) are comparatively healthy, and show a mean mortality for the two years 1891-92 of 31·5 in Udukinda (with a birth-rate of 46·6), 39·8 in Yatikinda (with a birth-rate of 50·5), and 38·0 in Wiyaluwa (with a birth-rate of 49·4), while the low-lying divisions are unhealthy and show a higher death-rate than birth-rate, being 48·3 in Wellassa (as against a birth-rate of 45·8), 53·4 in Bintenna (as against a birth-rate of 47·4), 59·8 in Buttala (as against a birth-rate of 47·3), and 68·7 in Wellawaya (the unhealthiest division). This division shows the highest death-rate and the lowest birth-rate in the district. The healthy condition of the population in the hilly divisions is due probably to the climate and to the prosecution of public works and the development of tea industry, while the excessive mortality of the low-country is mainly attributable to deficiency of the food supply and to periodical outbreak of malarial fever.

22. *Kégalla District*.—The mortality in the Kégalla District (24·3), though 27 per cent. below the rate in the Ratnapura District (33·4) of the same Province, was 20 per cent. above the mean rate for the period in 1881-90 (20·3). Of the several revenue divisions in this district, the healthiest, as shown by the lowest mean mortality for the last two years, was Lower Bulatgama, which has a rate of 17·0 as against 20·0 in Uda Bulatgama division of the Kandy District. In Dehigampal kóralé the mean mortality was 19·0, in Atulugam kóralé 23·3, in Paranawal kóralé 26·0, while the rate of mortality in Beligal kóralé was 20·3, in Paranakuru kóralé 27·5, in Galboda kóralé 27·6, and in Kinigoda kóralé 33·5. The superior healthiness of the Singhalese population of Lower Bulatgama division and of the divisions in Three Kóralés compared with the divisions in Four Kóralés (excepting Beligal kóralé division, the most prosperous division in the district) is due to the tea estates which provide the people with labour as well as a market for their produce.

#### V.—Causes of Death.

23. The causes of death registered in the Island during the quarter are given in detail in Table VII. in the Appendix. They may be summarised as follows:—

TABLE H.

District.	Cholera.	Small-pox.	Fevers.	Dysentery and Diarrhoea	Violence.				All other Causes.	Total.
					Accidents	Homicide	Suicide	Execution.		
CEYLON...	243	8	5,328	4,637	375	20	21	2	9,924	20,558

Badulla	15	—	491	460	29	—	1	—	582	1,578
Ratnapura	42	—	162	235	36	6	1	—	432	904
Kégalla	13	1	128	327	32	1	—	—	421	923

24. *Fever and Diarrhoeal Causes*.—Of the 20,558 deaths registered in the quarter, 5,328 were reported due to various forms of fever and 4,880 to diarrhoeal diseases, i.e. fever contributed 26 per cent. and diarrhoeal diseases 24 per cent. of the total deaths from all causes. Under the head diarrhoeal diseases is included cholera, which caused 243 deaths, a decline of nearly 50 per cent. on the last quarter. It is not unlikely that many of these cases, though returned as cholera, were really bad cases of diarrhoea.

25. Smallpox accounts for 8 deaths in this quarter (Colombo 4, Negombo, Jaffna, Mátara, and Kégalla 1 in each).

26. The other chief natural causes of death were infantile convulsions 1,634, worms 709, phthisis 629, debility 585, anaemia 515, puerperal convulsions 381, old age 319, pneumonia 249, rheumatism 176, thrush 170, ulcer and bedsores 150, measles 149, childbirth 129, premature birth 98, starvation, want of breast milk 92 (Badulla 22, Kandy 11, Jaffna, Mullaittivu, and Anurádhapura 8 in each, Nuwara Eliya and Vavuniya 7 in each, Mátalé and Trincomalee 5 in each, Kégalla 4, Ratnapura 3, Colombo, Mátara, Hambantota, and Kurunégala 1 in each), scrofula 77, asthma 76, bronchitis 66, paralysis 61, paranghi 60 (Kurunégala 30, Puttalam, Anurádhapura, and Kégalla 4 in each, Galle, Mátara,

Batticaloa, and Badulla 3 in each, Kandy 2, Colombo, Hambantota, Chilaw, and Ratnapura 1 in each), rickets 56, apoplexy 55, pleurisy 54, convulsions (adult) 45, varicose veins 45, dochimius duodenalis 48, anchilostomiasis 5, malarial cachexia 41, tetanus 40, cancer 32, whooping cough 30, diabetes 24, epilepsy 21, mania 18, leprosy 17 (Colombo 9, Batticaloa 4, Negombo, Galle, Kurunegala, and Kegalla 1 in each).

27. The large number of deaths attributed to convulsions (adult and infantile), and collapse is probably due to the vagueness of the vernacular term "sanni," used by the District Registrars to represent a large variety of diseases, and generally the last stage of most diseases, and which term is translated into English for the purposes of our returns as convulsions or collapse. I am inclined to the opinion that a large proportion of these deaths would more accurately be classed under fever or diarrhoeal diseases. A large deduction should also, I think, be made from the number of deaths now shown in my returns under rickets, inflammation, anaemia, debility, dropsy, &c. I regret that the steps I initiated when I was in the Department three years ago, in order to secure more accurate specification of causes of death by Registrars, were not persevered in, and that therefore it will be some years yet before the numerous body of Registrars scattered over the Island can be trained to supply such information in a form useful for statistical purposes.

28. *Deaths by Violence.*—Of the 418 deaths attributed to these causes, 89 are attributed to fall from trees, 86 to drowning, 41 to snake-bite, 26 to burns and scalds, 19 to injury at birth, 18 to fall of heavy substances, 17 to gun-shot wounds, 12 to poison, 4 to cut or stab wounds, 3 to suffocation, 5 to being run over by cart, 3 to being run over by train, 2 to injury from elephant, 2 to injury from bulls, 1 to sunstroke, 1 to a buffalo, 1 to a bear, 2 to wasps, 2 to hornets, 1 to a crocodile, 21 deaths were due to suicide, 1 by cut or stab wounds, 3 by poison, 4 by drowning, 8 by hanging, and the remaining 5 by other and undefined means.

29. *Murders and Executions.*—Twenty deaths registered in this quarter are attributed to murder and other forms of homicide (6 in Ratnapura, 5 in Colombo, Kalutara and Kurunegala 2 in each, Negombo, Kandy, Jaffna, Hambantota, and Kegalla 1 in each).

Two men were judicially executed in Colombo.

#### VI.—Births and Deaths on Estates.

30. The total number of births reported for registration this quarter from the estates in the Central and Uva Provinces were 1,364 (of which 5 were Europeans, 1 Burgher, 15 Sighalese, 1,341 Tamils, and 2 Moors), and the total number of deaths were 1,242 (of which 12 were Sighalese, 1,228 Tamils, and 2 Moors), corresponding respectively to an annual rate of 25·2 and 23·0 per 1,000. The causes of death are given in detail in Table XI., and may be summarised as follows :—

Fever	...	...	66	Bronchitis	...	...	22
Diarrhoea	...	...	170	Pneumonia	...	...	55
Dysentery	...	...	215	Diseases of Parturition	...	...	46
Want of Breast Milk	...	...	21	Debility	...	...	243
Old Age	...	...	25	Other Causes	...	...	306
Infantile Convulsions	...	...	73				

31. The subjoined table gives the birth and death-rates among the Tamil estate labourers in each district in the Central and Uva Provinces :—

32. *Kandy District.*—The total number of births reported for registration from the estates in the Kandy District numbered 702, of which 2 were Europeans, 12 Sighalese, 686 Tamils, and 2 Moors; and the deaths numbered 629, of which 9 were Sighalese and 620 Tamils. The Tamil birth-rate in the quarter was 29·7 as against a mean rate of 27·4 in the preceding seven quarters, and the Tamil death-rate was 26·9 as against a mean rate in the preceding seven quarters of 28·6. Of the 629 deaths, 166, or 26 per cent., were due to diarrhoea and dysentery. The other most fatal causes of death were debility 125 (including mostly deaths of infants from inability to suck milk), pneumonia and bronchitis 45, fever 43, infantile convulsions 37, diseases of parturition 31, old age 15, want of breast milk 11.

33. *Matalé District.*—The total number of births reported for registration from the estates in the Matalé District numbered 84 (all Tamils) and the deaths numbered 77 (3 Sighalese, 73 Tamils, and 1 Moor), and correspond to an annual birth-rate of 23·3 (against a mean rate of 20·8 in the preceding seven quarters) and an annual death-rate of 20·2 (against a mean rate in the preceding seven quarters of 26·6). Diarrhoea and dysentery caused 30 deaths. (i.e. 39 per cent. of total deaths), debility 13, infantile convulsions 4, want of breast milk 4, old age 3.

34. *Nuwara Eliya District.*—The total number of births reported for registration from the estates in the Nuwara Eliya District numbered 382 (Europeans 3, Burgher 1, Siphalese 3, and Tamils 375) and the deaths numbered 323 (322 Tamils and 1 Moor), and corresponded to an annual birth-rate of 24·1 (against a mean rate of 21·4 in the preceding seven quarters), and an annual death-rate of 20·7 (against a mean rate of 20·1 in the preceding seven quarters). Diarrhoea and dysentery caused 118 deaths (*i.e.* 36 per cent. of the total). The other chief causes of death were debility 79, pneumonia and bronchitis 20, infantile convulsions 19, fever 10, child-birth 9.

35. *Badulla District.*—The total number of births reported for registration from the estates in the Badulla District numbered 196 (all Tamils) and the deaths 213 (all Tamils), corresponding to an annual birth-rate of 26·0 (against a mean rate of 26·9 in the preceding seven quarters) and an annual death-rate of 28·3 (against a mean rate of 28·1 in the preceding seven quarters). 71 deaths (*i.e.* 33 per cent. of the total) are attributed to diarrhoea and dysentery, 26 to debility, 13 to infantile convulsions, 11 to fever, 10 to pneumonia and bronchitis, 5 to old age, 4 to child-birth, 4 to drowning.

### VII.—Health of the Town of Colombo.

36. The mortality in the town of Colombo this quarter was about 10 per cent. above the average, having been 23·7 as against 21·9 the mean rate for the corresponding period in the preceding five years. The causes of death are shown in detail in Table VIII. in the Appendix, and may be summarised as follows:—

Fever	...	...	130	Violence	...	...	21
Diarrhoea	...	...	78	Other causes	...	...	442
Dysentery	...	...	90				

37. Smallpox caused this quarter 1 death (the last death from this cause reported to this Department being in the second quarter of 1891), measles 1, and whooping cough 1. Cholera was absent in the quarter as in the immediately preceding quarters of the year.

38. The other causes include infantile convulsions 11, phthisis 64, worms 32, debility 24, malarial cachexia 23, old age 15, ulcer and bed sore 14, child-birth 11, apoplexy 10, pneumonia 9, paralysis 8, tetanus 6, anaemia 3, and bronchitis 1.

39. The subjoined table gives the births and deaths and their rates of each nationality living in the Colombo Municipality for the fourth quarter of this year and of 1891, and the average of the corresponding period in the previous five years:—

Nationality.	Population at the Census of 1891.	Births.				Deaths.				Births: Rate per Mille per Annum.		Deaths: Rate per Mille per Annum.	
		Average of the Fourth Quarters, 1887-91.	Fourth Quarter, 1891.	Fourth Quarter, 1892.	Average of the Fourth Quarters, 1887-91.	Fourth Quarter, 1891.	Fourth Quarter, 1892.	Average of the Fourth Quarters, 1887-91.	Fourth Quarter, 1891.	Fourth Quarter, 1892.	Average of the Fourth Quarters, 1887-91.	Fourth Quarter, 1891.	Fourth Quarter, 1892.
ALL RACES ...	127,836	554	617	601	634	769	761	17·5	19·0	18·7	20·0	23·7	23·7
Europeans, including													
Military	2,239	10	13	10	9	6	9	17·7	23·0	17·8	15·6	10·6	16·0
Burghers	10,674	37	29	17	24	23	21	14·1	10·7	6·3	9·0	8·4	7·8
Siphalese	59,962	230	224	250	237	284	285	18·7	14·6	16·6	16·2	18·5	18·9
Tamils	24,372	32	51	27	106	131	143	5·2	8·3	4·4	17·2	21·4	23·3
Moors	24,428	222	276	270	223	277	270	36·1	44·7	44·0	36·4	44·9	44·0
Malays	3,437	16	18	22	21	30	23	19·3	20·6	25·5	25·2	34·3	26·6
Others	2,724	7	6	5	14	18	10	11·7	8·5	7·3	22·1	25·4	14·6

40. *European Births and Deaths.*—The European deaths in the quarter were 9 in number, of which 3 resulted from zymotic diseases, 3 from local diseases, 2 from violence, and one from a constitutional disease, and correspond to an annual rate of 16·0 as against a birth-rate of 17·8.

41. *Births and Deaths of other Races.*—The death-rates of the different nationalities living in the town are not strictly comparable with each other. The European population of the town is small and fluctuating, and the rate calculated on such a population is not likely to be trustworthy for purposes of comparison. Similarly the death-rate of the Tamils is not a standard of their healthiness in relation to other nationalities. The low rate of the Tamil mortality in the town is due to the Tamil population of the town being of a migratory character, and containing a very small proportion of people at early or advanced periods of life, and an unduly large proportion at the middle period as compared with the other races.

60. As usual the highest death-rate in the town is among the Mohammedans (Moors 44·0 and Malays 26·6) and the lowest among the Burghers (7·8). The Tamil death-rate in the quarter is equal to 23·3, and is more than five times as large as their birth-rate (4·4). The death-rate among the Siphalese (18·9) was lower than among the Tamils this quarter (23·3) as in the three preceding quarters of this year, but the Siphalese death-rate for the town was higher than in the other divisions of the Colombo District except Héwágam kóralé (20·5).

## APPENDIX.

\* The estimate of the population is based on the Census of February 26, 1891, and the subsequent returns of Births and Deaths.

† Illegitimacy in Ceylon does not mean immorality on the part of the parents. A large number of people who marry are content with the customary or religious ceremonies, and do not think it necessary to comply with the requirements of modern legislation as to registration.
