Health Officer's Report for the Month of February, 1912.

G. FRED. BUULTJENS. Superintendent of Works.

Kandy, March 22, 1912.

Scavenging.—The scavenging of the town was satisfactorily done during the month.

Water Supply.—Good.

Drainage.—The drains were flushed and kept clean.

Alleys.—These were kept in as sanitary a state as possible.

Bakeries.—Fairly well kept.

Eating-houses.—Fairly well kept. Public Market.—Fairly well kept.

Slaughter-house.—Clean and well kept.

Night-soil Depôt.—Well kept. Public Latrines.—Fairly well kept.

Food Supply.—There is a scarcity of cattle at present. This is due, the butchers report, to the quarantine regulations in fore with regard to the importation of cattle from India. Fewer cattle are imported from India, and Colombo butchers now compete with them in the purchase of cattle from Minneriya and Kurunegala, the two districts from which they mainly obtained their supply. During the month 550 cattle, 85 buffaloes, 110 sheep an 295 goats were passed; 11 head of cattle, 5 buffaloes, 3 sheep, and 6 goats were rejected. 2 livers and 6 lungs of cattle, 5 livers and 2 lungs of buffaloes, 5 livers and 2 lungs of sheep, and 5 livers 34 lungs of goats were condemned and destroyed.

Public Health.—The health of the town during the month was good. One case of continued fever over seven days' duration, 3 cases of chickenpox, and 15 cases of enteric fever were reported. Of the last, 13 out of the 15 cases reported were from the Girls' Industrial school, Katukele. A little girls was sent in from Madulkele suffering from fever, which

was thought to be malaria; the case was one of enteric fever, and the other 12 contracted the disease from her.

Vaccination.—A male vaccinator was engaged during the month to vaccinate the residents at Lewella and those coming into the town, as smallpox was prevailing at Gunnapana. The vaccinator is at present working in the town. The total number vaccinated during the month is 300.

GEO. P. HAY, L.R.C.P. & S., (Edin.), L.E.P. & S. (Glas.) Medical Officer of Health,

Kandy, February 27, 1912.

NOTIFICATIONS UNDER "THE PATENTS ORDINANCE, 1906."

THE following Specifications have been accepted:-

No. 1,230 of December 22, 1911.

John Anderson.—"Improvements in feathering wind sails or propellers, applicable for wind mills, air ships and other purposes."

Abstract.—The type of propeller described in the Specification is that type which was formerly known as a paddle wheel with feathering paddles. The invention relates to mechanism for feathering the paddles in a manner which is claimed to be an improvement on known methods of doing that. Instead of feathering the paddles by a uniform speed of revolution about their own axes as the wheel revolves, the paddles are accelerated in their revolution at certain points and retarded at others with the object of keeping the paddles in a position normal to the driving (or driven) direction for a longer fraction of the time of one revolution of the wheel. The mechanism for doing that consits of a system of linkage driven by cranks and guided in frames; with epicyclic wheels transmitting motion to the cranks from gearing on the central shaft through chains and sprocket wheels.

Five claims: four sheets of drawings.

No. 1,240 of March 14, 1912.

Arthur Reginald Angus.—" Improvements in or relating to railway safe running devices."

Abstract.—These improvements are specially devised to provide means for automatically locking or unlocking the points or switches on railway tracks either by the train or from a signal box or the like and ensuring that the same are safe for the train to run over. It being sought first to give an intimation or warning to the driver on the train as to whether the sections of track adjacent to and including the points or switches are safe or not safe to run over, and if unsafe to stop the train automatically. The intimations or warnings are visual or audible or both. And the train is automatically stopped by the steam being shut off and the brakes applied. The means for doing that are electrical and mechanical: the chief apparatus being contact shoes for the rails, which are bonded in sections so as to make part of an electric circuit; and an electric generator on the train. The various devices for locking and unlocking switches and for providing against failure of the circuit are described.

The invention is an adaptation to points and switches of the type of apparatus described in the same inventor's previous Patents Nos. 1,179, 1,180, 1,181, and 1,192 for preventing collision between trains.

Thirty-two claims: two sheets of drawings.
