

SUPPLEMENT
TO THE
Ceylon Government Gazette
PART I.

No. 6,540 — FRIDAY, JANUARY 10, 1913.

VITAL STATISTICS OF CEYLON.

REPORT OF THE REGISTRAR-GENERAL FOR THE THIRD QUARTER OF 1912.

I.—Population.

THE estimated population of the Island on the last day of the quarter was 4,183,302, showing an increase of 22,641 on the preceding quarter, due to an excess of 20,432 arrivals over departures of Indian coolies and of 2,269 births over deaths.

2. *Arrivals and Departures of Indian Coolies.*—The number of Indian coolies who arrived in the Island during the quarter amounted to 38,936 and of departures to 18,504, as against 30,942 arrivals and 16,416 departures, the averages for the corresponding quarters of the last fourteen years.

II.—Marriages.

3. *Marriages.*—4,332 general marriages (*i.e.*, marriages other than Kandyan or Muhammadan) were registered during the quarter and 1,522 Kandyan marriages. Their distribution by Provinces and districts is given in Table I. in the Appendix.

4. Table VI. in the Appendix shows the marriages solemnized in the general community in each Province and district in the Island, the civil condition, nationality, the highest, lowest, and mean ages of the parties, the mode of solemnization, the number of bridegrooms and brides who were unable to sign their names in the register, &c. Table VII. gives similar information in respect of Kandyan marriages.

III.—Births and Deaths.

5. *Births.*—The births registered during the quarter numbered 31,605 (47 Europeans, 226 Burghers, 19,990 Sinhalese, 8,973 Tamils, 2,103 Moors, 124 Malays, and 142 Others), and were in the proportion of 30·6 per 1,000 persons living, as against 31·9 in the previous quarter and 34·4, the average for the third quarter in the period 1898–1908. See Table VIII. for each Province and district.

6. *Deaths.*—The number of deaths registered during the quarter amounted to 29,396 (22 Europeans, 144 Burghers, 17,785 Sinhalese, 9,409 Tamils, 1,736 Moors, 85 Malays, and 215 Others), and was equal to an annual rate of 28·5 per 1,000 persons living, as against the average 27·3 for the third quarters of 1898–1908 and 31·5, the rate in the preceding quarter. See Table IX. for each Province and district.

7. The births and deaths for the whole Island are compared in the following Table A with the previous quarter, the corresponding quarter of the previous year, and the average for the third quarters of 1898–1911, while the rates are compared also with the averages for the periods 1898–1908 and 1909–1911 respectively. All the rates in this, except the averages for the period 1898–1908, are calculated on the population as estimated on the basis of the Census of March 10, 1911. For the particulars as to each Province and district see Tables I. and II. —

TABLE A.

	Births.	Deaths.	Per Mille per Annum.	
			Birth-rate.	Death-rate.
Average for third quarter in 1898–1908	34·4 ..	27·3
Average for third quarter in 1909–1911	32,501*	27,193*	32·5 ..	33·5
Third quarter, 1911	36,006	45,041	34·7 ..	43·4
Second quarter, 1912	32,617	32,162	31·9 ..	31·5
Third quarter, 1912	31,605	29,396	30·6 ..	28·5

* Average for third quarter, 1898–1911.

8. The Island's death-rate (28·5), though a deterioration from the average (27·3) for the period 1898–1908, was an improvement on the preceding quarter (31·5), and especially on the third quarter of 1911, which was one of the two unhealthiest on record (43·4). The rate ranged from 43·1 in Mullaittivu to 17·7 in Negombo. The birth-rate (30·6) was lower than the average (34·4) and than the rate in the preceding quarter (31·9) and that of the third quarter of 1911 (34·7). The rate varied from 45·9 in Batticaloa to 18·3 in Negombo.

9. *Infantile Mortality.*—The deaths of infants under one year of age numbered 6,010, and were in the proportion of 190 to 1,000 registered births. The rate of infantile mortality ranged from 342 (for Tamils) in Mullaittivu, 303 (for Tamils) in Puttalam, 267 (for Sinhalese) in Puttalam, 265 (for Sinhalese) in Matale, to 144 (for Sinhalese) in Galle, 141 (for Sinhalese) in Kalutara, 130 (for Sinhalese) in Negombo, and 106 (for Sinhalese) in Nuwara Eliya.

IV.—State of Public Health.

10. The general health of the population during the quarter was almost normal, the death-rate being 28·5, as against the average (28·6) for the third quarters in the period 1898–1911, and was a great improvement on the corresponding quarter of 1911 (43·4), which was an exceptionally unhealthy period. After an appreciable improvement in the fourth quarter (to 36·0), the mortality rose in the first quarter of 1912 again to 43·4, but declined to 31·5 in the second quarter and 28·5 in this. In this quarter only two out of the nine Provinces showed an improvement on the average, viz., the Western with a rate of 22·3 (average 22·4) and the North-Western with 27·8 (average 32·6).

11. The healthiest Province during the quarter was the Western (as in the previous quarter), with a death-rate for all races of 22·3, followed by the Northern with 25·1. The unhealthiest Province was the Province of Sabaragamuwa, with a death-rate of 39·3 (average 31·8). The healthiest district for all races was (as in the previous quarter) Negombo (17·7), followed by Colombo (22·8) and Chilaw (22·9); and the unhealthiest, as in the previous quarter, Mullaittivu (43·1), followed by Hambantota (42·1). In the first quarter the death-rate of Mullaittivu was as high as 112·4. It fell to 64·3 in the second quarter and to 43·1 in the quarter under review, the epidemic of fever having gradually diminished. Hambantota District, which recorded a rate of 109·3 in the first quarter, showed a considerable improvement (52·1) in the second quarter, and still better (42·1) in the quarter under review.

12. Tables III., IV., and V. in the Appendix show the number of births and deaths registered in the several Provinces and districts of the Island, and in the revenue subdivisions of those districts for the quarter under review, and the averages for the corresponding quarters in the periods 1898–1908 and 1909–1911. The birth-rates and death-rates for all ages and for infants in the several Provinces and districts of the Island are shown for the Sinhalese only in the districts which are mainly inhabited by the Sinhalese, and for the Tamils only where they form the bulk of the population. In the Puttalam and Batticaloa Districts, which contain a resident population comprised of Sinhalese, Tamils, and Moors, the rates are given for each of the races. The rates in these tables for 1909, 1910, 1911, and 1912 are calculated on the population as estimated on the basis of the Census of March 10, 1911, and those of previous years on the Census of 1901.

13. *Western Province*.—The Sinhalese inhabitants of this Province, who on the first day of the quarter were estimated to number 904,704, were, as usual, the healthiest in the Island, with a death-rate of 20·4, a slight improvement on the previous quarter (20·7), and a very slight deterioration from the average (20·0). Negombo was the healthiest district in the Island, as in the previous quarter, with a death-rate of 16·9, and Colombo District occupied the third place in the Island in point of health. Negombo recorded the second lowest infantile mortality in the Island (130 per 1,000 births registered), and Kalutara (which recorded the lowest infantile mortality in the two previous quarters) the third lowest (141 per 1,000 births registered). The birth-rate of the Province (25·4) was worse than the average (30·1), a deterioration shared by all its districts. Negombo District recorded the lowest birth-rate in the Island (18·0).

14. *Central Province*.—The Sinhalese inhabitants of this Province, who on the first day of the quarter numbered 340,747, showed an improvement shared by all its districts on the preceding quarter (from 30·9 to 27·3), and were healthier than usual, the average death-rate for the quarter being 29·6. The improvement on the average was shared by two of its districts, the exception being Matale (37·6, average 35·4). This district recorded the third highest infantile mortality in the Island (265 per 1,000 births registered). Nuwara Eliya District recorded the second lowest death-rate (17·9) and the lowest infantile death-rate (106 per 1,000 births registered) in the Island. The birth-rate of the Province (33·7) was lower than the average (40·1), a deterioration shared by all its districts.

15. *Northern Province*.—The Tamil inhabitants of this Province, who form the bulk of the population, and were estimated to number 354,992, showed an improvement on the preceding quarter (from 33·8 to 24·7), but were slightly unhealthier than usual, the average death-rate for the quarter being 24·1. Mullaittivu was the unhealthiest district in the Province and in the Island (45·8), but showed a marked improvement on the two previous quarters. This district recorded the highest infantile mortality in the Island (342 per 1,000 births registered). The birth-rate of the Province (34·6) showed a deterioration from the average (38·7), shared by all its districts.

16. *Southern Province*.—The Sinhalese inhabitants of this Province, who numbered 598,391 on the first day of the quarter, fared worse than usual, the death-rate of the quarter rising to 28·1 from the average 24·8. But the death-rate of this quarter was an improvement on the previous quarter (32·2). The deterioration was shared by two of its districts, the exception being Galle (22·7, average 24·5), and was greater in Hambantota (42·5, average 26·6), which recorded the second highest death-rate in the Island, the first being Mullaittivu with 45·8. The birth-rate of the Province also showed a deterioration (32·7, average 36·0), shared by all its districts.

17. *Eastern Province*.—This Province, which at the beginning of the quarter was estimated to contain a Tamil population of 102,217 (of whom 85,098 were in the Batticaloa District and 17,119 in the Trincomalee District), 71,859 Moors, and 7,027 Sinhalese, recorded for the quarter death-rates 34·0, 25·1, and 56·0 for the Tamils, Moors, and Sinhalese respectively, against their respective averages 30·3, 27·7, and 33·3 for the corresponding quarter in the period 1898–1908. Thus, Tamils and Sinhalese fared worse than usual, while the Moors enjoyed better health. The birth-rate of the Province (43·4) was a slight deterioration from the average (44·3) shared by two sections of the population, the exception being the Sinhalese (71·9, average 37·2). This Province, however, recorded the highest birth-rate during the quarter for all the three sections of the population. Batticaloa District recorded birth-rates of 44·0, 45·0, and 81·6 for the Tamils, Moors, and Sinhalese respectively, and was the highest in the Island.

18. *North-Western Province*.—The Sinhalese, who form the bulk of the population of the Province, and were estimated to number 366,810 on the first day of the quarter, enjoyed better health than usual, their death-rate for the quarter falling to 27·8 from the average 31·5 for the period 1898–1908. Two of its districts shared in the improvement, the exception being Chilaw (22·7, average 18·9). Chilaw, however, as usual, was the healthiest district in the Province, with an infantile mortality of 194 per 1,000 births registered. Puttalam Sinhalese rate shows a great improvement (22·6, average 31·1) and the second highest infantile mortality in the Island (267

per 1,000 births registered). The Tamils and Moors of the Puttalam District also enjoyed better health than usual, with death-rates 33·6 and 24·2 respectively, against their respective averages 45·9 and 32·6 for the period 1898–1908. The birth-rate of the Province showed a deterioration for all the three sections of the population, namely, the Sinhalese with 23·9 (average 40·2), the Tamils 16·1 (average 21·9), and the Moors 29·3 (average 36·4). The Puttalam District recorded the second lowest Sinhalese birth-rate in the Island.

19. *North-Central Province*.—In the North-Central Province, which is co-extensive with the Anuradhapura District, the Sinhalese population, which amounted to 65,329 on the first day of quarter, fared worse than usual, their death-rate for the quarter having risen to 39·3 from the average 32·1 for the period 1898–1908. The birth-rate, too, showed a deterioration (32·0, average 41·5).

20. *Province of Uva*.—This Province, which is co-extensive with the Badulla District, recorded a death-rate of 36·7 for the Sinhalese, an improvement on the average (37·2), but a deterioration from the rate for the previous quarter (33·5). The birth-rate (41·0) showed a decline from the average (41·9), but was the second highest in the Island. The infantile mortality among the Sinhalese was 189 per 1,000 births registered, against 184 in the previous quarter.

21. *Province of Sabaragamuwa*.—The Sinhalese inhabitants of this Province, who on the first day of the quarter were estimated to number 297,011, fared better than usual, their death-rate falling to 26·7 from the average 28·2 for the period 1898–1908. Both its districts shared in the improvement. The birth-rate of the Province (28·6) was a deterioration from the average (37·3), shared by both its districts. The deterioration was greater in Kegalla (25·8, average 37·1).

22. For the health of the estate population (mainly Tamils) in the Central, Uva, Sabaragamuwa, and Western Provinces, and in the Galle, Matara, and Kurunegala Districts, see *infra*, Chapter VI., "Estate Population."

V.—Causes of Deaths.

23. The causes of deaths registered in the Island during the quarter are shown in detail in Table X. in the Appendix, and select causes of deaths are shown in the following Table B:—

TABLE B.—Causes of Death in the Districts of Ceylon, Third Quarter, 1912.

District.	Fevers.	Diarrhoea and Dysentery.	Bronchitis and Pneumonia.	Phthisis.	Convulsions of Infants.	Rickets.	Premature Birth.	Diseases and Accidents of Pregnancy.	Anchylostomiasis.	Small-pox.	Cholera.	Homicide.	Suicide.	Execution.	Total from all Causes.

Kegalla	404	620	106	52	131	83	24	58	164	—	—	5	4	—	2,388

24. *Smallpox*.—There were 2 deaths (Tamils) from smallpox reported for registration during the quarter (as against 7 in the previous quarter) from Colombo District. The deceased arrived from two infected areas in Southern India.

25. *Cholera*.—Two deaths of Tamils were reported for registration from Talagalla Hospital, Ragama. The deceased were reported to have come from an infected area in Southern India.

26. *Beri-beri*.—A death from beri-beri was registered of a Sinhalese in Galle District, who having contracted it in the Maldives returned to his native place for treatment.

27. Among the other causes of deaths were 6,021 pyrexia or simple fever, 95 enteric fever, 296 malaria, 279 malarial cachexia, 3,705 diarrhoea, 1,283 dysentery, 2,695 infantile convulsions, 815 intestinal parasites, 1,458 debility (mostly of infants from inability to suck), 1,077 rickets, 774 anaemia, 933 phthisis, 742 dropsy, 755 old age, 1,105 pneumonia, 467 ancylostomiasis, 374 puerperal septicaemia, 344 premature birth, 241 bronchitis, 177 rheumatism, 76 tetanus, 130 paralysis, 46 starvation and want of breast milk, 89 cancer, 16 whooping cough, and 32 measles.

28. *Death by Violence: Accidents*.—Of the 483 deaths attributed to accidents, 116 were due to fall from trees (mostly of toddy drawers), 105 to drowning (of which 28 from falling into wells and 5 into pits), 52 burns, 48 snake-bites, 21 to fall of heavy substances, 15 to fall, 11 to fall from heights other than trees; 9 deaths were due to being run over by carts, 6 by trains, and 4 by motor cars; elephants were responsible for 5 deaths, buffaloes for 3, and bulls for 2, crocodiles, apes, and fish for 1 each; 1 each was due to suffocation by the neck being entangled in a rope attached to a swing, by being caught between two buffers and to a wire shoot accident.

29. *Homicide.*—Fifty-nine deaths were due to homicide (49 Sinhalese, 6 Tamils, and 4 Moors), of which 11 were in Kurunegala, 10 in Kalutara, 9 in Colombo, 6 in Matale, 5 in Kegalla, 4 in Galle, 3 each in Negombo Jaffna, Hambantota, and Ratnapura, and 1 each in Kandy and Matara.

30. *Suicide.*—Forty-six deaths resulted from suicide (1 Burgher, 26 Sinhalese, 18 Tamils, and 1 Moor), of which 19 were by hanging, 8 by drowning, 7 by firearms, 4 by poison, 3 each by crushing and cutting or piercing instruments, and 2 by other means.

31. *Executions.*—There were 8 judicial executions (6 Sinhalese, 1 Moor, and 1 Malay) registered in the Island during the quarter, 5 in Kandy and 3 in Colombo.

VI.—Health of the Estate Population.

32. This chapter deals with the births and deaths of the population of the estates scheduled under "The Medical Wants Ordinance, 1912," situated in the Central, Uva, Sabaragamuwa, and Western Provinces, and in Galle and Matara Districts in the Southern Province, and Kurunegala District in the North-Western Province. The total number of births registered during the quarter amounted to 4,511 (8 Europeans, 12 Burghers, 152 Sinhalese, 4,249 Tamils, 42 Moors, 9 Malays, and 39 Others), and the deaths numbered 5,466 (1 European, 4 Burghers, 198 Sinhalese, 5,078 Tamils, 54 Moors, 7 Malays, and 124 Others), corresponding to an annual birth-rate of 35·4 and a death-rate of 42·9 per 1,000, as against the respective averages of 25·5 and 30·5 for the period of 1898–1908 and 33·2 and 39·0 for the period 1909–1911.

33. The deaths are in marked excess over births in Kegalla, Ratnapura, Colombo, and Matale Districts. Kegalla leads with the highest death-rate of 84·1, as against 55·6 in the previous quarter and 40·8 and 51·0, the averages for the third quarters 1898–1908 and 1909–1911 respectively. The next highest rates in the quarter were in Ratnapura, Colombo, Matara, and Matale, with 64·4, 50·8, 46·1, and 39·9, respectively. Kurunegala shows the lowest death-rate (24·4), and Badulla the next lowest (28·0). The highest birth-rate is noticeable in Matara (56·1), and the lowest in Kurunegala (15·8).

34. The causes of deaths are shown in detail in Table XI. in the Appendix, and select causes are shown in the following Table C. To ancylostomiasis are attributed 411 deaths, but the mortality is probably understated owing to the difficulty of diagnosis without microscopic examination of the faeces. Many of the deaths attributed to diarrhoea, dropsy, malarial cachexia, and anaemia are probably due to ancylostomiasis:—

TABLE C.—Causes of Deaths in Estates, Third Quarter, 1912.

Diarrhoea ..	985	Malarial cachexia ..	141	Burns ..	18
Debility ..	885	Premature birth ..	123	Rickets ..	17
Dysentery ..	858	Dropsy ..	90	Suicide ..	8
Ancylostomiasis ..	411	Bronchitis ..	75	Starvation and want of breast milk ..	2
Pneumonia ..	363	Phthisis ..	58	Homicide ..	2
Infantile convulsions ..	336	Intestinal parasites ..	57	All other causes ..	560
Fever ..	212	Anæmia ..	53		
Old age ..	191	Puerperal Septicæmia	21		

35. The following Table D gives the estate population at the Census of March 10, 1911, their birth- and death-rates for the third quarters of 1911 and 1912 and the second quarter of 1912, and the averages for the third quarters of 1898–1908 and 1909–1911:—

TABLE D.—Births, Deaths, and their Rates on Estates, Third Quarter, 1912, &c., and the Average Rates 1898–1908 and 1909–1911.

District.	Population at the Census of March 10, 1911.	Births registered during Third Quarter, 1912.	Deaths registered during Third Quarter, 1912.	Birth-rate per Mille per Annum.					Death-rate per Mille per Annum.				
				Average, Third Quarters, 1898–1908.	Average, Third Quarters, 1909–1911.	Third Quarter, 1911.	Second Quarter, 1912.	Third Quarter, 1912.	Average, Third Quarters, 1898–1908.	Average, Third Quarters, 1909–1911.	Third Quarter, 1911.	Second Quarter, 1912.	Third Quarter, 1912.

* Not available before first quarter, 1910, when estate statistics of these districts were first separately tabulated.

VII.—Health of the City of Colombo.

36. The births registered in the city of Colombo numbered 1,214, and corresponded to an annual rate of 21·3, being 4 per 1,000 lower than the average (21·7) for the corresponding quarters in 1898–1908.

37. The deaths registered numbered 1,600, and corresponded to a rate of 28·0, being 5·4 lower than the average (33·4) for the corresponding quarters in 1898–1908.

38. As usual in the city, the death-rate exceeded the birth-rate, owing mainly to the preponderance of males over females (chiefly among the Europeans, Indian Tamils, and Moors), to the presence of hospitals and jails, which add to the normal mortality of the city, and to the registration of births being still somewhat defective.

39. The subjoined Table E gives the births and deaths and their rates for each race for the third quarters 1912 and 1911, and the average for the third quarters in 1898-1908 and 1909-1911 :—

TABLE E.—Births and Deaths and their Rates by Race of the City of Colombo for the Third Quarters of 1912, 1911, and the Average 1898-1911.

Nationality.	Population (inclusive of the Military) at the Census of March 10, 1911.	Births.				Deaths.				Birth-rate per Mille per Annum.				Death-rate per Mille per Annum.

* These figures are based on the population as estimated on the basis of the Census population of 1901.

† These rates are calculated on the population estimated on the basis of the Census of March 10, 1911.

40. The rates for the quarter are calculated on the population estimated on the basis of the Census of 1911. Those for the quarters 1898-1908 are calculated on the population as estimated on the basis of the Census population of 1901; and those for 1909-1911 have been calculated on the estimated population on the basis of the Census of 1911. The rates for Europeans and the races classed together as "Others," being calculated upon small floating populations, are not very reliable. Excluding the rates for these sections, the lowest death-rate was among the Moors (23·5, against an average of 30·8), and the highest death-rate among the Sinhalese (30·4, average 35·5), followed by the Malays (28·0, average 35·8) and the Burghers (27·7, average 25·6).

41. The highest birth-rate in the quarter was among the Malays (35·7, against an average of 26·2), followed by the Burghers, who show a rate of 34·1, a rise of 3·9 over the average 30·2. The Europeans follow with a rate of 27·7. The rate for Sinhalese is 25·4, a fall of 1·8 from the average 27·2. The low birth-rates for Tamils and "Others" are due to their population being mainly a floating adult one.

42. Table XII. gives in detail the deaths from various causes in each ward of the city of Colombo and according to each nationality. The number of births and deaths in each ward of the city, their rates per mille per annum, and certain selected causes of deaths during the quarter are shown in the following Table F.:

TABLE F.—Births and Stillbirths by Ward and Deaths by Race and Ward of the City of Colombo and Selected Causes of Deaths in the Third Quarter of 1912.

* For "Births by Race," see Table G, next page.

+ These rates are calculated on the population as estimated on the basis of the Census of March 10, 1911.

† The city-rate is worked out independently of the ward-rates, and takes into account hospital deaths, &c., not assignable to wards.

43. Excluding the Fort and Galle Face and the Pettah Wards, which have for the most part a floating male adult population, the healthiest division of the city was Kollupitiya, with a death-rate of 12·5; while the unhealthiest was New Bazaar, with a death-rate of 26·7 per annum. Judged, however, by the infantile mortality, Kotahena was the healthiest. (See next paragraph.)

44. The following Table G indicates the comparative healthiness of each ward and race in the city on the basis of the infantile mortality :—

TABLE G.—Infantile Mortality, by Race and Ward, of the City of Colombo in the Third Quarter of 1912.

Infantile death-rates have been omitted where the number of births is less than five.

45. The infantile mortality was 364 for the whole city, but rose as high as 556 in Pettah, 510 in New Bazaar, falling to 336 in Slave Island and 298 in Kotahena. Among the races, the Moors lead with the highest mortality (458), followed by the Tamils (444), Sinhalese (361), and "Others" (304). The Tamil mortality rose to 750 in Wellawatta, and the Sinhalese to 667 in the Pettah. The European mortality was the lowest for the city (91), and that of the Malays (216) the next lowest.

46. The highest mortality was due to pneumonia and phthisis, which were responsible for 237 and 184 respectively, followed by infantile convulsions 141, diarrhoea and dysentery 113, enteritis 109, debility (mostly of infants) 87, old age 76, bronchitis 62, enteric fever 52, worms 39, nephritis 36, prematurity 32, and rickets 25.

VIII.—Health of the Principal Towns.

47. This chapter deals with the vital statistics of the thirty-one towns of the Island proclaimed under sections 31 to 36 of the Ordinance No. 1 of 1895. The Registrars of these towns are qualified medical men. No death occurring there is registered unless the cause is ascertained by the Registrar's personal inspection of the deceased, or certified by a qualified medical man in attendance on the deceased, and, as a rule, no body is buried or cremated before registration of the death.

48. Table XIII. in the Appendix shows the population at the last decennial Census of March 10, 1911, and the present estimated population, and the births, deaths, and stillbirths registered during the quarter, their rates, and the infantile mortality in each town, together with the monthly average birth- and death-rates and infantile mortality from July, 1907 (when monthly statistics were first published), to June, 1912, and the mean temperature and rainfall of each town in the quarter.

49. Corrected death-rates as well as crude death-rates are shown in Table XIII. By a corrected rate is meant the rate calculated for the population of each town on the basis that its age- and sex-constitution is the same as for the Island, and also excluding from the total deaths (as in the crude rate) hospital deaths of estate coolies and other persons who are not town residents. The corrected rate is thus a more satisfactory test of the comparative health of the towns than the crude rate.

50. *Population.*—The estimated population of the thirty-one towns is 527,764, or a little more than one-eighth of the total population of the Island. The population of the city of Colombo, 226,969, was more than seven-tenths of the population of all the other towns taken together.

51. *Births.*—The births registered in the thirty-one towns during the quarter numbered 3,454, of which 1,764 were of males and 1,690 of females, and corresponded to an annual birth-rate of 25.50 per 1,000 of the population, as against 26.88 during the previous quarter and 27.49 during the corresponding quarter of the previous year. Of the towns (excluding Vavuniya and Lunugala, which have a population under 1,000), the highest birth-rate for the quarter was in Hambantota (54.72), and the lowest in Nuwara Eliya (12.34), followed by Matale (16.18). In other towns the birth-rate ranged from 41.82 in Moratuwa, 39.17 in Batticaloa, 38.97 in Mannar, 34.80 in Tangalla, 34.09 in Jaffna, to 22.06 in Anuradhapura, 22.03 in Panadure, 20.18 in Kegalla, 18.91 in Ratnapura, and 17.52 in Kurunegala. The city of Colombo records a rate of 21.28, as against 22.26 in the previous quarter and 22.38 in the corresponding quarter of the previous year.

52. *Deaths.*—The number of deaths registered in the thirty-one towns during the quarter was 4,387, of which 2,417 were of males and 1,970 of females, and corresponded to an annual death-rate of 27.54 per mille, as against 28.51 during the preceding quarter and 34.32 during the corresponding quarter of the previous year.

53. *Stillbirths.*—The number of stillbirths registered in the thirty-one towns during the quarter was 189 (97 males and 92 females), against 211 in the previous quarter. Their distribution is shown in Table XIII.

54. The death-rate for all towns this quarter is better than in the previous quarter (28·51), and showed a marked improvement on the corresponding quarter of the previous year (34·32). Corrected quarterly death-rates not being available before the middle of 1907, the average cannot be stated for the quarter for the purpose of comparison. Taking, however, the average of the corrected monthly mortality rates up to June, 1912, the death-rate shows an improvement on the average (30·79). The improvement is noticeable in twenty-two out of the thirty-one towns, the principal exceptions being Moratuwa (35·85, average 23·09), Mannar (58·47, average 42·10), and Batticaloa (41·91, average 35·00).

55. Of the towns, excluding Vavuniya and Lunugala, the lowest corrected mortality during the quarter was recorded in Kegalla (6·47), and the highest in Mannar (58·47). In the other towns the death-rate ranged from 9·14 in Nuwara Eliya, 16·38 in Matara, 19·98 in Matale, 22·68 in Puttalam, 22·98 in Galle, to 39·14 in Ratnapura, 40·15 in Trincomalee, 41·91 in Batticaloa, and 47·57 in Anuradhapura.

56. In the following Table H the birth- and death-rates for each town for the quarter are compared with the rates for the third quarter of last year and the average birth- and death-rates for the corresponding quarters of the periods 1898–1908 and 1909–1911 respectively. The death-rates in this table are calculated on the total number of deaths, including non-residents :—

TABLE H.—Birth- and Death-rates of the Principal Towns in the Third Quarters, 1911, 1912, and 1898–1911.

Towns.	Birth-rate per Mille per Annum.				Death-rate per Mille per Annum.

57. *Infantile Mortality.*—The infantile mortality of the thirty-one towns was equal to a rate of 318 per 1,000 births registered, as against 315 in the previous quarter and 289 in the corresponding quarter of the previous year. In the towns having an estimated population of 5,000 or more, the mortality ranged from 407 in Ratnapura, 389 in Kandy, 387 in Batticaloa, 382 in Chilaw, to 244 in Badulla, 203 in Puttalam, 200 in Matara, and 143 in Weligama. In Colombo the rate was 364, against 381 in the previous quarter and 356 during the corresponding quarter of last year.

58. *Causes of Deaths.*—Table XIV. in the Appendix gives for each town and race the principal causes of deaths registered during the quarter, and shows the infantile mortality separately from the general mortality (one year and over).

59. *Infants.*—Of the 4,387 deaths from all causes at all ages in the thirty-one towns, 909, or more than one-fifth, were among infants under one year. Of these, the chief causes were 249 *convulsions* (of which 105 were in Colombo, 20 in Batticaloa, 14 each in Moratuwa and Kandy, 11 in Trincomalee); 167 *debility* (52 in Colombo, 20 in Jaffna, 16 in Kandy, 13 in Batticaloa, 10 in Galle); 108 *premature birth* (32 in Colombo, 18 in Jaffna, 17 in Kandy, 8 in Galle, 6 each in Negombo and Nuwara Eliya); 79 *pneumonia* (43 in Colombo, 13 in Moratuwa, 5 in Negombo); 49 *bronchitis* (28 in Colombo, 12 in Jaffna); 43 *tetanus* (18 in Galle, 12 in Jaffna, 5 each in Matara and Colombo); 40 *enteritis* (20 in Colombo, 10 in Jaffna, 7 in Moratuwa); and 38 *diarrhoea* (12 in Colombo, 6 in Jaffna, 5 each in Negombo and Moratuwa).

60. *General Mortality (One Year and over).*—Out of the 3,478 deaths of persons one year and over in age, there were 588 due to *diarrhoea* and *dysentery* (of which 101 were in Colombo, 60 in Ratnapura, 55 in Kandy, 43 in Jaffna, 34 in Nawalapitiya, 28 in Moratuwa); 472 to *pneumonia* (194 in Colombo, 43 in Kandy, 34 in Moratuwa, 26 in Negombo, 18 in Batticaloa, 16 in Jaffna, 14 in Kurunegala); 310 to *phthisis* (184 in Colombo, 26 in Galle, 20 in Kandy, 18 in Moratuwa, 14 in Jaffna); 165 to *enteritis* (89 in Colombo, 19 in Lunugala, 14 in Badulla, 13 in Jaffna, 11 in Galle); 141 to *malarial cachexia* (26 in Batticaloa, 13 each in Negombo and Ratnapura, 9 each in Trincomalee and Kegalla); 137 to *malaria* (30 in Jaffna, 12 each in Negombo and Mannar, 11 in Tangalla, 9 each in Colombo and Batticaloa); 115 to *ankylostomiasis* or *dochmiasis duodenalis* (22 in Matale, 18 in Kandy, 12 each in Colombo and Badulla, 11 in Nawalapitiya); 95 to *Bright's disease* and *nephritis* (50 in Colombo, 9 in Galle, 7 in Moratuwa); 88 to *enteric fever* (52 in Colombo, 11 in Moratuwa, 7 in Kalutara, 4 each in Galle and Kurunegala); 87 to *convulsions* (39 in Colombo, 7 in Batticaloa, 5 each in Kandy and Jaffna); 70 to *accidents* or *negligence* (16 in Colombo, 11 in Galle, 6 in Kandy); 61 to *bronchitis* (34 in Colombo, 5 in Puttalam); 50 to *puerperal septicæmia* (9 in Colombo, 8 in Jaffna, 6 in Kurunegala); 31 to *pyrexia* or *fever* (9 in Anuradhapura, 5 in Jaffna); 25 to *anaemia* (10 in Colombo, 4 each in Negombo and Jaffna); 25 to *diabetes mellitus* (8 in Colombo, 5 in Kandy); and 20 to *cancers* (12 in Colombo).

61. *Percentage of Principal Causes of Deaths at all Ages.*—Of the total number of deaths at all ages in the towns, *bronchitis* and *pneumonia* accounted for 15 per cent., *diarrhoea* and *dysentery* 14 per cent., *infantile convulsions* 8 per cent., *phthisis* 7 per cent., and *fevers* nearly 7 per cent.

Registrar-General's Office,
Colombo, December 12, 1912.

P. ARUNACHALAM,
Registrar-General.

APPENDIX.

* For meaning of "corrected" rate see paragraph 49 of report. [†] Calculated on the number of children under one year and on the number of still-births. [‡] Blanks indicate that there are no observatories or rain gauges. [§] This includes the population of Wellawatta Ward added to the city, January, 1912. Since March 1, 1912, the registration limits have been extended, but the population of the old limits known, the rates continue to be calculated on the events and population of the old limits. ^{||} Corrected death-rates for "Hatton and Dikoya," Weligama, Kalpitiya, and Lunugala towns not available, as they were created registration districts after the Census of 1901, viz., January, 1905, July, 1908, and October, 1904, respectively.
