

SUPPLEMENT
TO
The Ceylon Government Gazette,
PART I.

No. 5,921—FRIDAY, MAY 8, 1903.

VITAL STATISTICS OF CEYLON.

REPORT OF THE REGISTRAR-GENERAL FOR THE FOURTH QUARTER OF 1902.

I.—Population.

THE estimated population of the Island on the last day of the quarter was 3,683,882, being an increase of 22,924 on the previous quarter, due to an excess of 14,762 births over deaths and of 8,162 arrivals over departures of Indian coolies. Table I. in the Appendix gives the area of each Province and district of the Island, with its population (exclusive of immigrants), and the number of marriages, births, and deaths registered during the quarter.

2. *Arrivals and Departures of Indian Coolies.*—The number of Indian coolies who arrived in the Island during the quarter amounted to 15,574, and the departures numbered 7,412. The former number is only 58 per cent. of the average (26,040) for the corresponding quarter in the previous five years, and the latter only 32 per cent. of the average (23,292).

II.—Marriages.

3. *Marriages.*—The number of general marriages (*i.e.*, marriages other than Kandyan or Mohammedan) registered during the quarter was 5,144 and of Kandyan marriages 1,901.

4. Table VI. in the Appendix shows the marriages solemnized among the general community in every Province and district in the Island, the civil condition, nationality, the highest, lowest, and mean ages of the parties, the mode of solemnization, the number of bridegrooms and brides who were unable to sign their names in the register, &c.

5. Table VII. gives similar information in respect of the Kandyans.

6. *First Marriages; Re-marriages.*—Of the 5,144 general marriages, 4,498 (equal to 87 per cent.) were between bachelors and spinsters, 395 between widowers and spinsters, 182 between bachelors and widows, 63 between widowers and widows, 5 between divorced men and spinsters, and 1 between a bachelor and a divorced woman. Of the 1,901 Kandyan marriages, 1,437 (equal to 76 per cent.) were between bachelors and spinsters, 213 between widowers and spinsters, 80 between bachelors and widows, 75 between widowers and widows, 39 between divorced women and bachelors, 29 between divorced men and spinsters, 11 between divorced men and divorced women, 10 between divorced women and widowers, and 7 between divorced men and widows.

7. *Age at Marriage.*—The mean age at marriage for the general community was 29.7 for males and 22.9 for females, and for Kandyans 27.9 for males and 20.6 for females. The mean ages are probably misleading for in many cases, the parties would appear to have contracted marriages according to their religious customs and lived together as husband and wife for years before registering the marriage.

8. *Minors.*—In the general community 3 per cent. of the bridegrooms and 43 per cent. of the brides, and amongst the Kandyans 13 per cent. of the bridegrooms and 64 per cent. of the brides, were under 21 years of age.

9. *Mixed Marriages.*—There were 32 mixed marriages during the quarter: 20 between Sinhalese and Tamils, 7 between Burghers and Sinhalese, 2 between Europeans and Burghers, and 3 other mixed marriages.

10. *Signatures in Marriage Register.*—Of the 10,288 persons married in the general community during the quarter, 1,498 men and 3,954 women signed the register with marks; that is to say, 29 per cent. of the men and 77 per cent. of the women were unable to write their names. Of the 3,802 Kandyans married, 734 men and 1,828 women signed the register with marks; *i.e.*, 39 per cent. of the men and 96 per cent. of the women were unable to write their names.

III.—Births and Deaths.

11. *Births.*—The births registered during the quarter numbered 39,116 (56 Europeans, 171 Burghers, 28,261 Sinhalese, 7,929 Tamils, 2,536 Moors, 112 Malays, and 51 Others), and were in the proportion of 42·4 to 1,000 persons living, as against an average of 33·1 for the six fourth quarters of the period 1891–1896, 41·9 the average for the period 1898–1901, and 34·0 the rate for the preceding quarter. The birth- and death-rates for the quarter under report and the preceding quarter being based on the Census population of 1901, the rates of previous quarters, which had been calculated on previous estimates of population, have now been revised on the basis of the Census population.

12. *Deaths.*—The total number of deaths registered during the quarter was 24,354 (42 Europeans, 111 Burghers, 15,162 Sinhalese, 7,227 Tamils, 1,647 Moors, 79 Malays, and 86 Others), and were equal to an annual rate of 26·4 per 1,000, as against the averages of 26·1 and 29·5 for the fourth quarters of the periods 1891–1896 and 1898–1901 respectively, and 24·9 the rate for the preceding quarter.

13. The births and deaths and their rates in the quarter are compared in the following table with the results obtained in the previous quarter and the average rates for the fourth quarters in the periods 1898–1901 and 1891–1896:—

TABLE A.

	Births.	Deaths.	Per Mille per Annum.	
			Birth-rate.	Death-rate.
Average for the fourth quarter in 1891–1896	26,338	20,739	33·1	26·1
Average for the fourth quarter in 1898–1901...	36,988	26,053	41·9	29·5
Third quarter, 1902	31,241	22,868	34·0	24·9
Fourth quarter, 1902	39,116	24,354	42·4	26·4

14. The birth-rate for the quarter (42·4) was in excess of the rate for the preceding quarter (34·0), as well as the average rates in the periods 1891–1896 and 1898–1901, 33·1 and 41·9 respectively. The death-rate for the quarter (26·4) was an improvement on the average in the period 1898–1901 (29·5), but was a deterioration from the average in 1891–1896 (26·1) and the rate in the previous quarter (24·9).

15. Table II. in the Appendix gives information similar to that given in Table A in respect of each Province and district in the Island; Table I. gives the births and deaths according to sex; Table VIII. the births according to nationality and sex; Table IX. the deaths for each month of the quarter (according to nationality) for each Province and district. The causes of death for each district are shown in Table X.; and for the estates in the Central, Uva, and Sabaragamuwa Provinces, and in the Kalutara and Colombo Districts of the Western Province in Table XI.; and for the town of Colombo (according to wards and nationalities) in Table XII. Table XIII. shows the period of life at which the deaths of the various races occurred in every district.

16. *Sex.*—Of the total number of births (39,116), 20,208 were males and 18,908 were females, *i.e.*, there were 107 males born to every 100 females. Of the total number of deaths (24,354), 12,414 were males and 11,940 were females. Out of equal proportions living of each sex, there died 915 males to 1,000 females.

17. *Infant Mortality.*—The deaths of infants under one year of age numbered 6,649, and were in the proportion of 169 to a 1,000 registered births. The rate of infant mortality varied in different districts, from 338 (for Tamils) in Trincomalee, 315 (for Moors) in Puttalam, 248 (for Sinhalese) in Anuradhapura, 230 (for Sinhalese) in Batticaloa, and 228 (for Sinhalese) in Matale, to 125 (for Sinhalese) in Matara, 124 (for Sinhalese) in Galle, 123 (for Sinhalese) in Hambantota, 116 (for Sinhalese) in Colombo, 109 (for Sinhalese) in Kalutara, 104 (for Sinhalese) in Negombo, and 85 (for Sinhalese) in Chilaw.

18. *Centenarians.*—Forty-nine deaths (25 males and 24 females) were reported to be of centenarians, but the ages can hardly be relied upon.

IV.—State of Public Health.

19. The general health of the population of the Island during the quarter (mortality 26·4), though worse than in the previous quarter (24·9), was about the average for the corresponding quarter in 1891–1896 (26·1), and an improvement on the average in 1898–1901 (29·5).

20. Tables III., IV., and V. in the Appendix show the births and deaths, the birth-rates and the death-rates for all ages in the several Provinces and districts of the Island and in the revenue subdivisions of those districts for the quarter under review, for the preceding quarter, and the average for the corresponding quarters of the periods 1891–1896 and 1898–1901, the latter period showing more reliable statistics owing to the improvements effected in the system of registration by the introduction of the Ordinances Nos. 1 and 2 of 1895. The year 1897 is omitted, as during the first half of the year the old Ordinances were in operation. The rates shown are for the Sinhalese only in the districts which are mainly inhabited by the Sinhalese, and for the Tamils only where the Tamils form the bulk of the population. In the Puttalam District, where the Sinhalese and Mohammedans are found in almost equal numbers, and in the Batticaloa District, which is inhabited in almost equal numbers by Tamils and Mohammedans, the rates are given for the different sections of the population.

21. The healthiest Province in the quarter was, as usual, the Western, the death-rate being 20·1. The healthiest district was Chilaw (13·3), and the healthiest division was Pitigal korale south (12·0), followed by Pitigal korale central (12·6).

22. *Western Province.*—The Western Province showed a death-rate of 20·1 among its Sinhalese inhabitants, who fared slightly worse than in the previous quarter (18·9) and in the periods 1891–1896, and 1898–1901 (17·1 and 19·6 respectively). Two of its three districts, *viz.*, Colombo and Kalutara, fared slightly worse than usual.

23. In the Colombo District the death-rate for the quarter (20·3) showed an increase of 1 per 1,000 on the previous quarter and the average rate in 1898–1901, and of 4 per 1,000 on the average in 1891–1896. All its subdivisions, except Hewagam korale, showed enhanced death-rates as compared with the previous quarter, as well as the average rates in the periods 1891–1896 and 1898–1901. In Hewagam korale the death-rate (16·0) was lower than in the previous quarter (17·1) as well as the average rates in 1891–1896 and 1898–1901 (17·4 and 16·2 respectively). Siyane korale west (14·2) showed the lowest death-rate in the district and also in the Province, and Colombo Municipality (37·4) the highest. This division is dealt with at greater length in Chapter VII.

24. The Negombo District showed a mortality of 16·5 per mille per annum for the quarter, and was a slight deterioration from the previous quarter (15·6), but an improvement on the average rates for the periods 1891–1896 and 1898–1901 (16·8 and 18·4 respectively). Of its three subdivisions, Negombo Local Board showed the highest rate of mortality in the district (31·4), and fared worse than in the last quarter (25·5), but better than in the period 1891–1896 (40·0) and in the period 1898–1901 (34·4). Hapitigam korale showed a death-rate of 15·9, an improvement on the periods 1891–1896 (16·9) and 1898–1901 (17·3), but a deterioration from the rate in the preceding quarter (14·6). This division showed the highest birth-rate in the Province (46·3).

25. The Kalutara District, with a Sinhalese population of over 200,000, showed an annual mortality of 22.1 per mille, an increase on the previous quarter (20.3) and on the average rates in the periods 1891-1896 and 1898-1901 (17.9 and 21.6 respectively). The lowest death-rate in the district was in Pasdun korale east (19.0), followed by Rayigam korale (19.7), and the highest in Kalutara Local Board (32.1). The birth-rate of the district (42.9), though nearly the same as the average in 1898-1901, showed a marked improvement on the rate in the previous quarter (30.3) and the average in 1891-1896 (31.9).

26. *Central Province.*—The Central Province showed a death-rate of 32.2 in the quarter, as against 27.8 in the previous quarter and 30.8 and 35.3 in the periods 1891-1896 and 1898-1901 respectively. The lowest rate of mortality was in the Kandy District, and the highest in Matale. The births registered during the quarter were in the proportion of 50.4 per mille per annum, as against 40.7 in the previous quarter, 36.9 in the period 1891-1896, and 53.6 in the period 1898-1901.

27. In the Kandy District the death-rate (31.3) showed a decrease from the average in 1898-1901 (32.5), but an increase on the average in 1891-1896 (26.5), and the rate in the previous quarter (26.4). Of its ten subdivisions, the Kandy Municipality, Harispattu, Uda Dumbara, and Uda Palata showed enhanced death-rates as compared with the previous quarter and the period 1891-1896, but diminished rates as compared with the period 1898-1901; Pata Dumbara, Udu Nuwara, and Yati Nuwara showed increased rates as compared with the previous quarter as well as the periods 1891-1896 and 1898-1901; in Pata Hewaheta the rate of mortality was lower than in the previous quarter, but higher than in the periods 1891-1896 and 1898-1901; in Tumpane the death-rate was higher than in the previous quarter, but lower than in the periods 1891-1896 and 1898-1901; and in Uda Bulatgama the rate was identical with the average in 1898-1901, higher than the average in 1891-1896, and lower than the rate in the previous quarter. The highest death-rate in the district was in Uda Dumbara (46.3), and the lowest in Uda Bulatgama (19.8).

28. In the Matale District the rate of mortality in the quarter was equal to 35.3 per mille per annum, and showed a slight deterioration from the previous quarter (32.9), but a considerable improvement on the average rates in 1891-1896 (40.4) and in 1898-1901 (44.6). The healthiest division in the district was Matale south (23.6), which also showed a decrease from the previous quarter and the average rates in 1891-1896 and 1898-1901; and the unhealthiest the Matale east division (52.6), this rate being a deterioration from the previous quarter (33.8) and the average rates in 1891-1896 and 1898-1901 (47.3 and 44.7 respectively).

29. The Nuwara Eliya District presented a death-rate of 32.0, a slight decline from the average in 1898-1901 (32.6), but a rise on the average in 1891-1896 (29.4), and the rate in the previous quarter (26.9). The lowest death-rate among the subdivisions was in Kotmale (23.0), which fared better than in the period 1891-1896 (26.3) and in 1898-1901 (25.3), but worse than in the previous quarter (19.8). The highest death-rate was in Walapane (41.4), a great deterioration from the rate in the preceding quarter (33.5) and the average rates in 1891-1896 and 1898-1901 (34.6 and 37.9 respectively). This division also showed the highest birth-rate in the district.

30. *Northern Province.*—The Northern Province, with a population of over a third of a million Tamils, showed a Tamil death-rate of 31.7 for the quarter, being an increase on the rate in the previous quarter (22.4) and the average rates in 1891-1896 and 1898-1901 (25.6 and 28.4 respectively). The increase was confined to the Jaffna and Mannar Districts, Mullaittivu showing a diminished rate. The birth-rate of the Province showed an improvement in the quarter (41.3), as against 37.4 in the previous quarter and 33.6 and 39.3 the respective averages in the periods 1891-1896 and 1898-1901. This improvement was shared by two of its three districts, viz., Jaffna and Mannar.

31. In the Jaffna District the mortality among the Tamils was in the proportion of 31.7 per 1,000 living, and showed a great deterioration from the rate in the preceding quarter (21.9) and from the average rates in the periods 1891-1896 and 1898-1901 (24.9 and 27.6 respectively). The healthiest division in the district was Vadamaradchi east (13.0), followed by Vadamaradchi west (22.7). With the exception of these two divisions, all the subdivisions of the district showed enhanced death-rates, as compared with the previous quarter as well as the periods 1891-1896 and 1898-1901. In Vadamaradchi east the improvement in health was most noticeable, the death-rate for the quarter being over 19 per 1,000 less than in the previous quarter and 30 per 1,000 and 12 per 1,000 respectively less than the averages for the periods 1891-1896 and 1898-1901. The mortality in Vadamaradchi west (22.7) was slightly in excess of the rate in the previous quarter (20.3), but less than in the period 1891-1896 (23.8) and in the period 1898-1901 (24.9).

32. The Mannar District showed a death-rate of 31.2 during the quarter, an improvement on the average in 1898-1901 (36.1), but a deterioration as compared with the previous quarter (25.0) and the period 1891-1896 (22.1). Each of its three subdivisions, viz., Mannar Islands division (33.5), Mantai division (31.4), and Nanaddan division (28.2), showed higher death-rates than in the previous quarter and in the period 1891-1896, but lower rates than in the period 1898-1901. The birth-rate in the district rose to 39.1 during the quarter from 34.9 in the previous quarter and 23.7 and 35.3 the respective averages in the periods 1891-1896 and 1898-1901.

33. In the Mullaittivu District the Tamils showed an improvement in health, their death-rate declining to 31.5 in the quarter from 32.2 in the previous quarter, 37.3 the average in 1898-1901, and 42.3 the average in 1891-1896. In Mariimattivu the death-rate (27.2) was in excess of the rate in the previous quarter by about 4 per mille, but considerably lower than the average rates in 1891-1896 and 1898-1901 (39.2 and 36.1 respectively). In Vavuniya north (27.7) the improvement is noticeable, as compared with the previous quarter (38.9), as well as the average rates (48.0) in 1891-1896 and (41.1) in 1898-1901. In Vavuniya south the death-rate (40.3) was above the average in 1898-1901 (37.1), but below the average in 1891-1896 and the rate in the previous quarter (41.2).

34. *Southern Province.*—The Southern Province, which contains more than half a million Sinhalese, recorded a death-rate of 24.7 in the quarter, being a rise on the rate in the previous quarter (23.0), but a decline from the average rates in 1891-1896 (27.1) and 1898-1901 (26.1). The birth-rate for the Province rose to 51.4 during the quarter from 37.6 in the previous quarter and 32.3 and 49.6 the respective averages in 1891-1896 and 1898-1901. Of its three districts, Galle showed the lowest death-rate (24.6), and was very closely followed by Matara (24.7). The rate in Hambantota was 25.3.

35. The inhabitants of the Galle District, who number over 246,000, showed a death-rate of 24.6 in the quarter, and fared slightly worse than in the previous quarter (23.7), but enjoyed better health than usual, the average rates in 1891-1896 and 1898-1901 being 27.2 and 27.5 respectively. The birth-rate in the quarter (53.6) exceeded the rate in the previous quarter by over 18 per mille, and the average rates in 1891-1896 and 1898-1901 by 19 per mille and 5 per mille respectively. The healthiest division in the district, and in the Province, was the Four Gravets beyond Municipal limits and Akmimana, 20.1 for all ages and 99 for infants, followed by Gangaboda pattuwa (21.4); and the unhealthiest Talpe pattuwa (27.6) and Walallawiti korale (27.6). The division of Four Gravets beyond Municipal limits and Akmimana also showed the highest birth-rate in the Province (61.2).

36. The death-rate in the Matara District (24.7), though 4 per 1,000 above the rate in the previous quarter, was an improvement on the average rates in 1891-1896 and 1898-1901 (25.2 and 25.7 respectively). All its subdivisions,

except the Matara Local Board, showed higher death-rates than in the previous quarter. Compared with the average in 1898-1891, all its subdivisions, except Four Gravets beyond Local Board limits and Morawak korale, showed improved health; and compared with the average in 1891-1896, three of its subdivisions, viz., Four Gravets beyond Local Board limits, Wellaboda pattuwa, and Kandaboda pattuwa, showed improved health, the other four subdivisions showing a deterioration. The lowest death-rate in the district was in Wellaboda pattuwa (20.3), and the highest in Morawak korale (35.6). This division also showed a high infant mortality, viz., 234 per 1,000 births registered.

37. In the Hambantota District the mortality among the Sinhalese was at the rate of 25.3 per 1,000 living, as against 23.3 in the previous quarter and 27.5 and 23.8 the respective averages in the periods 1891-1896 and 1898-1901. Hambantota Four Gravets (64.6) showed the highest death-rate, and was followed by Magam pattuwa, exclusive of Four Gravets (55.7). The lowest death-rate was in Giruwa pattu west (22.1), followed by Giruwa pattu east (27.3).

38. *Eastern Province.*—The mortality in the Eastern Province was at the annual rate of 31.0 among the Tamils, who form the bulk of the population; 28.1 among the Moors, who count the next largest number; and 31.4 among the Sinhalese, who hardly number 9,000. The birth-rate in the Province was highest among the Moors (61.0), next among the Tamils (50.3), and lowest among the Sinhalese (37.7).

39. In the Batticaloa District the Tamils, who number over 81,000, showed a death-rate of 30.6, which is a slight deterioration from the rate in the previous quarter (27.5) as well as the respective averages in 1891-1896 and 1898-1901 (29.3 and 30.5). The death-rate among the Moors in the quarter was 29.5, as against 26.8 in the previous quarter, 24.2 the average in 1898-1901, and 25.0 the average in 1891-1896. The Sinhalese in the district showed a death-rate of 33.9, as against 34.5 in the previous quarter, 36.8 the average for the corresponding quarter in 1898-1901, and 30.3 the average in 1891-1896. The lowest death-rate among the Tamils was in Chammanurai pattu (13.0), among the Moors in Panawa pattu (11.1), and among the Sinhalese in Akkarai pattu (30.6).

40. In the Trincomalee District the Tamil death-rate during the quarter (33.0) was in excess of the previous quarter by 10.1 per 1,000, but below the average rates in 1891-1896 and 1898-1901 by .5 and 8 per 1,000 respectively. Each of its four subdivisions showed enhanced death-rates as compared with the previous quarter, and, with the exception of the town, diminished death-rates as compared with the average in 1898-1901. Compared with the average in 1891-1896, two of its subdivisions, viz., Trincomalee town and Kaddukulam pattu, showed diminished rates. In Koddiiyar pattu, the healthiest division in the district, the death-rate (24.1) was in excess of the rate in the previous quarter (12.1) and the average in 1891-1896 (15.4), but a considerable improvement on the average in 1898-1901 (46.7).

41. *North-Western Province.*—The health of the inhabitants in the North-Western Province showed an improvement in the quarter, their death-rate falling to 21.7 from 25.5 in the previous quarter and 28.8 and 32.7 the respective averages in the periods 1891-1896 and 1898-1901. Each of its three districts showed better health than usual.

42. In the Kurunegala District (23.7) the Sinhalese enjoyed better health than in the previous quarter (27.7), in the period 1891-1896 (31.7), and in the period 1898-1901 (36.7). With the exception of Dambadeni hatpattuwa, all the subdivisions of the district showed lower rates than in the previous quarter and in the periods 1891-1896 and 1898-1901. In Dambadeni hatpattuwa the death-rate was slightly in excess of the rate in the previous quarter (21.7), but much below the average rates in 1891-1896 (35.1) and 1898-1901 (45.3). The healthiest division in the district was Katugampola hatpattuwa (15.4), and the unhealthiest the Kurunegala Local Board (38.0). But this rate is a considerable improvement on the previous quarter (43.9), and the average rates in 1891-1896 and 1898-1901 (72.1 and 57.2 respectively).

43. In the Puttalam District, which contains a mixed population of about 12,000 Sinhalese, 10,000 Moors, and 8,000 Tamils, showed death-rates of 28.7, 44.1, and 29.5 for the Sinhalese, Moors, and Tamils respectively. The mortality among the Sinhalese, though 2 per 1,000 in excess of the rate in the previous quarter, was an improvement on the average rates in 1891-1896 (35.2) and in 1898-1901 (32.6). The healthiest division for the Sinhalese was the Kalpitiya division 13.9. The death-rate of the Tamils (29.5) was a marked improvement on the rate in the previous quarter (36.7) and the average rates in 1891-1896 (35.4) and in 1898-1901 (32.0). The healthiest division among the Tamils was Puttalam division (17.1). For the Moors the rate recorded in the quarter (44.1), though lower than in the period 1898-1901 (45.4), was a great deterioration from the rate in the previous quarter (28.9) and the average in 1891-1896 (29.9).

44. The Chilaw District enjoyed better health than usual, the death-rate in the quarter being 13.3, as against the averages of 16.4 and 18.2 in 1891-1896 and 1898-1901 and a rate of 17.2 in the previous quarter. Its four subdivisions ranked in the following order in point of healthiness:—Pitigal korale south (12.0), Pitigal korale centra (12.6), Pitigal korale north (18.3), and Chilaw town (20.9). The birth-rate in the district was in the proportion of 39.4 per 1,000, as against 31.9 in the previous quarter and 28.0 and 42.8 the respective averages in the periods 1891-1896 and 1898-1901.

45. *North-Central Province.*—The North-Central Province, or the Anuradhapura District, with which it is coextensive, showed a death-rate of 35.9 during the quarter, and showed improved health as compared with the average for the corresponding quarters in the period 1898-1901 (41.0), but a deterioration as compared with the rate in the previous quarter (32.8), and the average in 1891-1896 (31.6). The death-rates in the subdivisions ranged between 32.8 in Hurulu palata, the healthiest division, and 55.9 in Anuradhapura town, the unhealthiest division.

46. *Province of Uva.*—The Province of Uva, which is conterminous with the Badulla District, and contains a Sinhalese population of nearly 125,000, showed a death-rate of 44.4 in the quarter, an excess of 9 per 1,000 on the previous quarter, but a decline from the average rates in 1891-1896 and 1898-1901 (47.1 and 55.7 respectively). Judging from the average death-rates in the period 1891-1896, five of its eight subdivisions showed improved health, the exceptions being Buttala, Wellassa, and Udukiinda; and judging from the average in 1898-1901, all its subdivisions, except Wellawaya (54.1), showed improved health. Compared with the rates in the previous quarter, however, all the subdivisions, except Udukiinda and the Local Board, declined in point of health. The lowest death-rate in the district was in Badulla Local Board (24.7), and the highest in Buttala (62.6). The birth-rate in the Province (60.1) showed a great improvement on the rate in the previous quarter (47.4), the average for the corresponding quarters of the period 1891-1896 (53.6), and the average for the corresponding quarters of the period 1898-1901 (56.3).

47. *Province of Sabaragamuwa.*—The Province of Sabaragamuwa recorded a death-rate of 25.6 and a birth-rate of 53.9 in the quarter. The death-rate was 2.6 above the rate in the previous quarter, but below the average rates in the periods 1891-1896 and 1898-1901 by 2.3 and 4.5 respectively.

48. In the Ratnapura District the death-rate for the quarter (28.8) was higher than the rate in the previous quarter (25.4), but lower than the average rates in the periods 1891-1896 and 1898-1901 (34.2 and 33.1). All the subdivisions in the district, except the Kuruwiti korale, showed increased death-rates on the previous quarter. Compared with the average death-rates in 1891-1896 and 1898-1901, all its subdivisions, except Kukulu korale, enjoyed better health. In Kukulu korale (27.5) there was an improvement as compared with the average in 1891-1896 (29.2), but a deterioration as compared with the average in 1898-1901 (26.2). The highest birth-rate among the subdivisions was in Meda korale (61.2), and the lowest in Ratnapura Local Board (38.6).

49. The Kegalla District showed a death-rate of 22.9, as against 21.1 in the previous quarter, 22.7 the average of the corresponding quarters in the period 1891-1896, and 27.6 the average of the corresponding quarters in the period 1898-1901. The birth-rate in the district rose to 55.2 from 34.3 in the previous quarter and 37.1 and 52.3 the respective averages in the periods 1891-1896 and 1898-1901. Next to the town of Kegalla which showed a death-rate of 39.3. Galboda korale showed the highest death-rate (29.1) as well as the highest birth-rate (67.9) in the district. The lowest death-rate (18.5) as well as the lowest birth-rate (42.0) was in Panawal korale.

V.—Causes of Deaths.

50. The causes of deaths registered in the Island during the quarter are given in Table X., and are summarized below:—

TABLE B.

District.	Cholera.	Small-pox.	Diarrhoea & Dysentery.	Fevers.	Violence.				All other Causes.	Total.
					Accident.	Suicide.	Homicide.	Execution.		
CEYLON ...	10	2	5,111	4,564	400	30	38	11	14,188	24,354

51. *Fever and Diarrhoeal Diseases.*—Of the 24,354 deaths registered in the Island, 4,564 were reported as due to various forms of fever and 5,121 to diarrhoeal diseases, *i.e.*, fever and diarrhoeal diseases contributed nearly 40 per cent. of the total number of deaths.

52. *Cholera.*—Under the head Diarrhoeal Diseases are included 10 deaths from cholera in the Kandy District. There were 2 deaths from smallpox in the Colombo District and 2 from chickenpox (1 in Galle and 1 in Ratnapura). Measles were responsible for 75 deaths. Whooping cough for 10 and mumps for 2 (1 each in Negombo and Kandy). Influenza proved fatal in 23 cases, of which 5 each were in Kandy, Nuwara Eliya, and Badulla, 2 each in Colombo, Kalutara, and Matale, and 1 each in Matara and Ratnapura.

53. The other chief natural causes of death were infantile convulsions 2,623, general debility (mostly of infants from inability to suck) 1,266, phthisis 855, anæmia 724, pneumonia 680, general dropsy 658, old age 577, worms 554, puerperal convulsions 265, premature birth 248 (133 in Badulla alone), thrush 216, malarial cachexia 218, bronchitis 187, rheumatism 143, paralysis 110, and asthma 76. *Dochmius duodenalis* caused 75 deaths (19 in Kalutara, 15 in Kandy, 13 in Colombo, 12 in Kegalla, 6 in Galle, 4 in Ratnapura, 2 each in Nuwara Eliya and Matara, and 1 each in Kurunegala and Badulla). Parangi caused only 22 deaths in the quarter.

54. *Deaths by Violence.*—Of the 479 deaths attributed to violence, as many as 400 were due to accident or negligence. Of these, 114 were by drowning, 80 by fall from trees, 28 by fall of heavy substance on, and 8 by falls from heights other than trees. Twelve deaths resulted from gunshot wounds, 15 from burns and scalds, 69 from snake bite, 12 from other poisons, 1 from cut stab, and 1 from a blow from a cricket bat. Five persons were killed by being run over by carts, 3 by trains, 1 by a tram car, and 1 by a machine. Twenty-one deaths were attributed to injury at birth, 2 to lightning, and 2 to explosion of gunpowder. Four deaths were returned as due to hornet stings, 3 to injuries caused by alligators, 1 to injuries caused by a dog, 1 to a rat bite, 1 to injuries caused by a buffalo, and 1 to injuries caused by a wild boar.

55. *Suicide.*—Thirty deaths were attributed to suicide, of which 19 were by hanging, 5 by drowning, 3 by gunshot wounds, 2 by poison, and 1 by cut stab. Of these, 2 were Europeans, 15 Sinhalese, 12 Tamils, and 1 Moor.

56. *Homicide.*—Thirty-eight deaths were attributed to homicide (8 in Colombo, 5 in Kandy, 4 each in Kalutara and Negombo, 3 in Galle, 2 each in Matale, Matara, Hambantota, Kurunegala, and Kegalla, and 1 each in Jaffna, Batticaloa, Anuradhapura, and Badulla). Of the victims, 35 were Sinhalese and 3 Tamils.

57. *Executions.*—Judicial executions in the quarter amounted to as many as 11 (9 Sinhalese and 2 Tamils). Of these, 4 were in Colombo, 6 in Kandy, and 1 in Galle.

VI.—Health of the Estate Population.

58. The total number of births reported for registration from the estates in the Central, Uva, and Sabaragamuwa Provinces, and in the Colombo and Kalutara Districts of the Western Province was 2,564 (12 Europeans, 10 Burghers, 76 Sinhalese, 2,426 Tamils, 33 Moors, 6 Malays, and 1 Other), and the total number of deaths was 2,416 (6 Europeans, 1 Burgher, 37 Sinhalese, 2,355 Tamils, 14 Moors, 1 Malay, and 2 Others), corresponding to an annual birth-rate of 24.2 and a death-rate of 22.8 per mille, as against the respective averages of 19.7 and 27.4 for 1898-1901. The causes of death are given in Table XI., and may be summarized as follows:—

TABLE C.

Debility ...	470	Fevers ...	132	Childbirth ...	31
Dysentery ...	399	Infantile convulsions ...	103	Phthisis ...	28
Diarrhoea ...	370	Old age ...	91	<i>Dochmius duodenalis</i> ...	27
Pneumonia ...	189	Malarial cachexia ...	88	Anæmia ...	21
General dropsy ...	135	Bronchitis ...	36	All other causes ...	296

59. The following Table D gives the estate population as enumerated at the Census of 1901 in each district, its birth- and death-rates for the third and fourth quarters of 1902, and the average rates for the corresponding quarters in 1893-1896 and 1898-1901. The Nuwara Eliya District, which has one-fourth of the estate population of the Island, shows as usual the lowest death-rate :—

TABLE D.

District.	Population at the Census of 1901.	Birth-rate per Mille per Annum.				Death-rate per Mille per Annum.			
		Average of Fourth Quarters, 1893-1896	Average of Fourth Quarters, 1898-1901	Third Quarter of 1902.	Fourth Quarter of 1902.	Average of Fourth Quarters, 1893-1896	Average of Fourth Quarters, 1898-1901	Third Quarter of 1902.	Fourth Quarter of 1902.
Kandy ...	155,444	19.3	22.6	25.4	25.2	21.6	30.9	29.8	22.8
Matale ...	26,136	19.5	19.8	22.5	21.1	20.8	37.5	37.8	31.3
Nuwara Eliya ...	103,564	26.7	17.3	22.2	21.1	23.9	18.7	23.1	15.0
Badulla ...	51,788	23.1	21.9	18.7	25.1	22.5	22.8	19.9	24.8
Ratnapura ...	16,642	20.5	23.7	17.4	39.3	19.0	35.5	27.7	41.5
Kegalla ...	41,499	17.9	23.4	20.9	22.8	29.0	35.5	31.6	26.0
Colombo ...	8,302	—	14.8	15.3	16.7	—	41.2	34.4	17.2
Kalutara ...	16,965	7.9	18.1	19.6	27.8	28.5	51.2	32.7	27.4
Total ...	420,340	20.9	19.7	22.4	24.2	22.5	27.4	27.7	22.8

60. *Kandy District.*—The total number of births reported for registration from the estates in the Kandy District was 989 (6 Europeans, 19 Sinhalese, 942 Tamils, 19 Moors, 2 Malays, and 1 Other), and the deaths numbered 894 (5 Sinhalese, 880 Tamils, and 9 Moors). The birth-rate during the quarter was equal to 25.2, as against 22.6 the mean rate for the corresponding quarters of 1898-1901; and the death-rate to 22.8, as against 30.9 the mean rate for the corresponding period of 1898-1901. The most fatal causes of death were, as usual, diarrhoeal diseases, which caused 287 (10 cholera, 140 diarrhoea, and 137 dysentery) deaths, or nearly 32 per cent. of the total number of deaths (894). The other chief causes of death were debility (mostly of infants from inability to suck) 216, general dropsy 61, pneumonia 57, infantile convulsions 48, fevers 33, old age 30, bronchitis 22, malarial cachexia 17, premature birth 10, cholera 10, and dochmias duodenalis 9.

61. *Matale District.*—The total number of births reported for registration from the estates in the Matale District was 139 (2 Sinhalese, 133 Tamils, 2 Moors, and 2 Malays), and the deaths numbered 206 (2 Sinhalese, 200 Tamils, 3 Moors, and 1 Malay). The birth-rate recorded for the quarter (21.1) was in excess of the average for the corresponding quarters of 1898-1901 (19.8); and the death-rate was 31.3, as against the mean rate 37.5 for the fourth quarters of 1898-1901. Dysentery and diarrhoea were responsible for 42 deaths, or nearly 20 per cent. of the total number of deaths (206). The chief causes of death were malarial cachexia 33, pneumonia 24, debility 21, fevers 19, dropsy 17, infantile convulsions 11, and old age 8.

62. *Nuwara Eliya District.*—The total number of births reported for registration from the estates in the Nuwara Eliya District, which contains nearly one-fourth of the estate population in the districts under review, was 552 (3 Europeans, 5 Burghers, 15 Sinhalese, 523 Tamils, 5 Moors, and 1 Malay), and the deaths numbered 393 (1 European, 1 Burgher, 6 Sinhalese, 384 Tamils, and 1 Other). The birth-rate during the quarter (21.1) was in excess of the average for the fourth quarters of 1898-1901 (17.3); and the death-rate was 15.0, as against the mean rate 18.7 for the fourth quarters of 1898-1901. The chief causes of death were diarrhoeal diseases 114 (56 diarrhoea and 58 dysentery), which caused nearly 29 per cent. of the total number of deaths (393), debility caused 103 (mostly of infants from inability to suck), pneumonia 27, fevers 22, infantile convulsions 22, old age 19, dropsy 14, childbirth 8, malarial cachexia 7, and tabes mesenterica 7.

63. *Badulla District.*—The total number of births reported for registration from the estates in the Badulla District during the fourth quarter of 1902 was 327 (5 Burghers, 3 Sinhalese, 316 Tamils, and 3 Moors), and the deaths numbered 324 (2 Europeans, 7 Sinhalese, and 315 Tamils). The birth-rate for the quarter was 25.1, as against 21.9 the average for the fourth quarters of 1898-1901; and the death-rate was 24.8, as against 22.8 the average for the corresponding period of 1898-1901. The chief causes of death were diarrhoeal diseases 101 (60 diarrhoea and 41 dysentery), which caused nearly 31 per cent. of the total number of deaths (324), debility caused 59 deaths (mostly of infants from inability to suck), pneumonia 49, fevers 41, general dropsy 13, old age 7, phthisis 7, and infantile convulsions 6.

64. *Ratnapura District.*—The total number of births reported for registration from the estates in the Ratnapura District was 165 (2 Europeans, 10 Sinhalese, and 153 Tamils), and the deaths numbered 174 (1 European, 8 Sinhalese, and 165 Tamils). The birth-rate for the quarter was 39.3, as against 23.7 the average for the corresponding period of 1898-1901; and the death-rate was 41.5, as against the average 35.5. Here, as elsewhere, the chief natural causes of death were diarrhoeal diseases, which caused 74 deaths (16 diarrhoea and 58 dysentery), or nearly 42 per cent. of the total number of deaths (174). The other chief causes of death were debility 20, old age 12, pneumonia 10, dropsy 7, and dochmias duodenalis 4.

65. *Kegalla District.*—The total number of births reported for registration from the estates in the Kegalla District was 238 (17 Sinhalese, 218 Tamils, and 3 Moors), and the deaths numbered 272 (2 Europeans, 6 Sinhalese, 263 Tamils, and 1 Moor). The birth-rate for the quarter was 22.8, as against 23.4 the average for the corresponding period of 1898-1901; and the death-rate was 26.0, as against 35.5 the average. Diarrhoeal diseases were responsible for 102 deaths (57 diarrhoea and 45 dysentery), or 37 per cent. of the total number of deaths (272). The other chief causes of death were debility 27, malarial cachexia 19, general dropsy 17, pneumonia 13, old age 12, fevers 14, dochmias duodenalis 8, infantile convulsions 8, phthisis 7, and childbirth 7.

66. *Colombo District.*—The total number of births reported for registration from the estates in the Colombo District during the quarter under report was 35 (1 European, 2 Sinhalese, 31 Tamils, and 1 Malay), and the deaths numbered 36 (2 Sinhalese, 32 Tamils, 1 Moor, and 1 Other). The birth-rate for the quarter was 16.7, as against the mean rate for the corresponding period of 1898-1901; and the death-rate was 17.2, as against 41.2 the average for the fourth quarters of 1898-1901. Here, too, as elsewhere, diarrhoeal diseases caused the largest number of deaths, *i.e.*, 13, nearly 36 per cent. of the total number of deaths (36). The other causes of death were debility 7 and malarial cachexia 3.

67. *Kalutara District.*—The total number of births reported for registration from the estates in the Kalutara District was 119 (8 Sinhalese, 110 Tamils, and 1 Moor), and the deaths numbered 117 (1 Sinhalese and 116 Tamils). The birth-rate for the quarter was 27.8, as against 18.1 the average for the corresponding period of 1898-1901; and the

72. The low birth- and death-rates of the Fort and Galle Face and the Pettah Wards are due to their population being a floating male adult one. Excluding these two divisions, the healthiest division of the town was, as usual, Kollupitiya Ward, with a death-rate of 17·4 per mille per annum, and the unhealthiest St. Paul's Ward, whose death-rate was 34·4, followed by New Bazaar Ward (32·4) and St. Sebastian Ward (32·3). The highest birth-rate was in Slave Island Ward (29·7), and the next highest in New Bazaar Ward (28·9).

73. There were no deaths from cholera, and only one from smallpox, which occurred at the Infectious Diseases Hospital, Kanatta, to which the patient was removed from Slave Island.

74. Phthisis, bronchitis, and pneumonia were fatal in 263 cases (against an average of 241 in the corresponding period of the last seven years), diarrhoea and dysentery in 226 (average 208), infantile convulsions in 131 (average 145), debility in 119 (average 96), tetanus in 115 (average 43), fevers in 107, including 21 of enteric fever (average 20) and 37 of remittent fever (average 50), old age in 72 (average 67), diseases of the circulatory system in 34 (average 24), worms in 20 (average 29), premature birth in 20 (average 30), doctimus duodenalis in 13 (average 13), anæmia in 10 (average 17). Other causes of death were Bright's disease 13, apoplexy 12, diseases of liver 12, peritonitis 12, enteritis 8, diseases of brain 8, cancer 8, malarial cachexia 7, paralysis 7, syphilis 6.

75. Seventeen deaths were due to accidents, of which 7 were due to fall of heavy substance, 4 to drowning, 3 to being run over by carts, 1 to fall from height, 1 to being run over by tram car, and 1 to burns. Two deaths were attributed to suicide (one by gunshot and the other by a cut), and none to homicide.

VIII.—Health of other Towns.

76. The following Table G shows the births and deaths and their rates per 1,000 for each of the principal towns of the Island for the fourth quarter of 1902 and the average rates for the fourth quarters in 1898–1901 :—

TABLE G.

Town.	Population (inclusive of the Military) at the Census, 1901.	Fourth Quarter, 1902.			Birth-rate per Mille per Annum			Death-rate per Mille per Annum.

* Inclusive of hospital and jail deaths.

77. The death-rates are given inclusive of hospital and jail deaths as well as exclusive of them. In some of the towns which attract large numbers of estate coolies and destitute poor to the hospitals the difference between the two rates is striking, e.g., Gampola 65·5 and 27·2, Nawalapitiya 63·5 and 19·7, Matale 76·5 and 21·1, Ratnapura 33·2 and 18·0, Kegalla 43·2 and 13·6.

APPENDIX.

Table I.—Area, Estimated Population, and the Number of Marriages, Births, and Deaths registered in the Fourth Quarter of 1902.
