^a The standardized death-rates represent the crude death-rates multiplied by the respective standardizing factor in order to make correction for differences of sex- and age-constitution of the several populations in 1911 as compared with that of this Island.
^b Blanks indicate that there are no observatories or rain gauges.
^c Includes population of the Negombo Local Board and registration area.
^d This increase of population not available, as the populations of these towns has not been enumerated at the Census of 1911 by age and sex, while the town of Kalmital was created a registration division only in January, 1914, and Ambalangoda in January, 1915.
^e Estimated to the end of December, 1918, by natural increase method.
^f Standardized death-rates for Kalpitiya and Lunugala towns.
^g The death-rates given for "All Towns" is, therefore, independent of the towns, but is scarcely affected by their rates.
