Resolved that the above recommendation of the Standing Committee be adopted.

Extracts from the Minutes of the Meeting of the Special Committee appointed by Council on May 14, 1924, " to consider the question as to whether permission should be granted in future to Clubs to erect Pavilions in Public Parks " of July 1, 1924.

1. The Committee are of opinion that the rights of the public to the use of the City Parks must be preserved and that this can be done and is being done by the system of temporary leases on nominal rentals now being granted to clubs.

2. It is realized that, as athletics extend, there may be rival claims to the use of grounds from several clubs. In that case grounds must be shared, or some other suitable rotation arrangement must be made or the matter may be settled by ejection of a club or clubs.

3. If a time arrives, which is not the case at present, when the free use of the parks by the public is hampered by the leases granted to clubs, then these leases must be cancelled, the clubs ejected and the prior rights of the public must take precedence.

4. Where clubs build pavilions, they must be given to understand that they build them at their own risk and that they may be ordered to leave them whenever the Municipality decides that this is necessary.

5. Till conditions alter it seems advisable in the interests of health and recreation to allow clubs organized for athletics to use portions of the grounds in public parks, provided that no exclusive use of anything except the pavilions, is allowed. The lease form now in use should be slightly altered so as to make this clear to the lessees.

6. In the case of leased grounds not already enclosed or fenced, no enclosures of any kind should be allowed.

7. Clubs should be allowed to build pavilions on leased grounds where the erection of such is in no way detrimental to the amenities or convenience of the public.

8. In the cases of the Havelock Sports Club and the Bloomfield Cricket and Athletic Club it is recommended that, as their pavilions would in no way interfere with the amenities of Havelock Park or Campbell Park, these clubs should be allowed to erect the same.

Resolutions.

Resolved that the recommendations of the Special Committee be adopted.

The Chairman moved that the Council do resume. Mr. C. P. Dias seconded.—Carried.

The Chairman formally moved in Council that the resolutions of Council in Committee, and the recommendations of the various Committees, subject to any amendments of such recommendations by the Council in Committee, be adopted. Mr. C. P. Dias seconded.—Carried.

THE following Specifications have been accepted :—

No. 2,017 of November 20, 1922.

William Edward Jenkinson and Alexander Henry Anderson.
"Improvements relating to collars for wear."

Abstract.—The applicants describe a method of joining the top and band of a linen collar. A strip of material is folded to S-shape and pressed. The top and band are placed with overlapping edges and are stitched to the binding strip which lies along the outer side of the top, between the top and the band and along the outer side of the band. Preferably the edges of the binding strip are folded inwards. A device for folding the binding strip consists of a metal plate with an S-shaped aperture; after passing through which the strip is pressed between a pair of rollers. A device to form a W-shaped strip is also described.

The claims are :—

1. A collar for personal wear comprising a separate top and band of single ply or multiply fabric, joined together by simply overlapping the edges to be joined and by stitching to them a binding strip which lies along the outer side of the top, passes round the edge thereof to the other side between the overlapped portions, passes round the edge of the band, and to the outer side thereof.
2. A collar as claimed in claim 1, in which the outer edges of the binding strip are folded inwardly for the purpose specified.
3. A collar as claimed in claim 1, or 2, or 3, in which the binding strip is continued past the end of the top and acts as a binding strip and stiffener for the upper and end edges of the tabs at either end of the band.
4. The manufacture of a collar for personal wear, comprising a separate top and band of single ply or multiply fabric, by simply overlapping the edges to be joined and by stitching to them a binding strip of S or W-shape in such manner that the edges of the top and band lie within the bends thereof, the binding strip being folded by means of a folder adapted to form, in co-operation with rollers, the strip into the proper shape.

5. For use in the manufacture of a collar according to claim 1 or claim 4, a binding strip of a flattened S or W-shape in cross-section, with or without in-turned edges.

6. For use in folding the binding strip according to claim 5, a folder such as shown at Fig. 6 for forming an S-shaped strip or a folder such as shown at Figs. 9, 10, and 11, for forming a W-shaped strip.

7. A collar for personal wear made substantially as described with reference to the accompanying drawings. One sheet of drawings.

"Improvements in machines for cutting tea and for separating stalk from tea in the process of manufacture."

Abstract.—An adjustable hopper is fitted over a pair of rollers. The rollers have cells on their surfaces. A blunt cutter blade is resiliently mounted so that its edge is near the surface of the roller. A hard obstruction bends this blade back, a stalk is flattened against the periphery of the roller. Lower down is a bevelled edged sharp cutter which may or may not be resiliently mounted and which is closer to the surface of the roller than the first; hard obstructions and stalk strike the bevelled edge and pass over it; leaf projecting from the cells is cut off and passes over the blade. The contents of the cells which are then of uniform size pass below the blade and collect at the bottom.

The claims are:—

1. A tea cutting and stalk separating machine comprising in combination an adjustable hopper, fitted over rollers having cells on its outer periphery, resiliently mounted upper and lower knives engaging said rollers and characterized that said upper knives are blunt, and are spaced a suitable distance from said rollers, and that said lower knives are sharp and adjusted close to said rollers, deflecting plates for separating the stalks from the graded leaves substantially as and for the purpose described.

2. A tea cutting and stalk separating machine as in claim 1, characterized that the lower sharp knives may be independently and non-resiliently mounted as and for the purpose described.

3. In a tea cutting and stalk separating machine as in claim 1 and 2 an adjustable hopper substantially as described.
