6. The number of Students to be admitted to the Ceylon Medical College in any year shall not exceed fifty.

7. The course of medical study in the Ceylon Medical College shall extend to a period of not less than five years after registration.

NOTIFICATIONS UNDER "THE PATENTS ORDINANCE, 1906."

THE following Specification has been accepted :—

No. 2,357 of December 6, 1928 (date applied for under Section 50 of the Ordinance, December 14, 1927).

Ronald Marsden Hamilton.

Improvements in or relating to totalisators and the like.

Abstract.—Each bet is registered on the bet scale for one particular horse and on a pool scale for all the horses. By means of a differential this is caused to calculate and record the odds automatically.

The claims are :—

1. In a totalisator machine the combination of a movable pool scale or scales or their equivalents, movable bets scales for each horse, the pool and bets scales being logarithmically divided, and means for indicating the relative movement between each bets scale and the pool scale or scales for the purpose of directly indicating odds for each horse.
2. A totalisator machine as claimed in claim 1 wherein the means for indicating relative movement between each bets scale and the pool scale comprise a pointer and logarithmically divided odds scale and means for moving the one relatively to the other proportionately to the relative movement of the bets and pool scales.
3. A totalisator machine as claimed in claim 2 wherein the odds scale is operatively connected to the pool scale to move therewith and the pointer is operatively connected to the bets scale to move therewith, or *vice versa*.
4. A totalisator machine as claimed in claim 1 or claim 2 wherein the pool and bets scales are circular and re-entrant for the purpose described.
5. A totalisator machine as claimed in claim 4 wherein the pool and bets scales are coaxial with one another.
6. A totalisator machine as claimed in claim 4 or claim 5 wherein the pool and bets scales are interconnected by a differential gear (for example, the endless wire or band 25, pulleys 27, 31 and connecting member 26) and the differential element of the gear (for example, the connecting member 36) is operatively connected to the odds scale or a pointer therefor.
7. A totalisator machine as claimed in any one of the preceding claims wherein a separate pool scale is allocated to each bets scale and means are provided permitting any one of the pool scales to be moved backward independently of the other pool scales, but in unison with the corresponding bets scale for the purpose described.
8. A totalisator machine as claimed in any one of claims 1–6 inclusive for place betting, wherein means are provided for moving all the pool scales forward simultaneously by equal amounts.
9. A totalisator machine comprising parts substantially as described with reference to or as illustrated in figures 1 and 2 or figure 3 of the accompanying drawings.
