THE following Specification has been accepted :—

No. 2,938 of February 4, 1937.

Percival Lionel Harbour.

An improved apparatus for regulating the discharge of leaf from Tea Rolling Machines.

Abstract.—The invention describes a new form of discharge device for a rolling table consisting of a single flap door, the opening and closing of which is effected by a screw operating gear. On the spindle of the said gear are arranged balanced coiled springs such that any attempt to overwind in closing the door results in the spindle itself being withdrawn away from the operator; this acts as a warning. In the closed position a positive locking device can be operated which consists of a forked lever engaging in a pair of slots. In the open position of the door, owing to the coiled springs, the door may be moved (without operating the screw gear) to allow the leaf collecting trolley to be withdrawn.

There are four claims and one sheet of drawings.
