THE following Specification has been accepted:—

No. 2,974 of June 30, 1937. (Date applied for under Section 50 of the Ordinance, May 25, 1937.)

Hoare & Company (Engineers), Ltd.

Improvements relating to tea drying and like machines.

*Abstract.*—The inventors describe an arrangement of rotary spreaders for tea drying machines in which provision is made for simultaneously raising all the spreaders relatively to the conveyor surfaces when it is desired to pass the tea thickly through the drier a second time, before packing. Provision is also made for individual adjustment.

According to the invention, a common panel on each side of the machine carries bearings for the spreaders. These bearings are adjustable on the panels themselves. The whole panel is movable in an upward direction by means of a device comprising a worm and wheel and a screw-threaded spindle.

There are four claims and one sheet of drawings.

Reference has been directed in pursuance of section 11 (6) to the following:—Specification of Patent No. 2962 of December 17, 1936, granted to Davidson & Company, Limited.
