PART I.—GENERAL.

GOVERNMENT NOTIFICATIONS.

CENSUS OF CEYLON, 1946.

THE tabulated statement given below is issued in response to numerous requests for an early classification of the population of the Island by sex, age, race, and religion. It is based on the abstracts forwarded by the Commissioners of Census for each census enumeration unit and classifies, according to the desired particulars, (1) the population found on the night of March 19, 1946, at the place of enumeration at the Preliminary Census; (2) persons inadvertently omitted during the Preliminary Census but who were enumerated on the night of March 19, 1946; and (3) new arrivals in the Island since the conclusion of the Preliminary Census. Persons in categories (2) and (3) above are classified as belonging to the locality in which they were found and enumerated on the night of March 19, 1946. Persons who were found on that night elsewhere in the Island than at their original place of enumeration at the Preliminary Census have not been taken into account in the classification. The aggregate of such "unclassified" persons, however, is only 2·2 per cent. of the total population of the Island, and does not exceed 4·1 per cent. of the total population of any district for which figures are published below.

Subject to these observations, therefore, the population now classified may be regarded as forming the *de jure* or normally resident population of the locality described in column 1 of the Table published below. The population enumerated on estates, defined as "agricultural holdings which are 20 acres or more in extent", is included in the Table in the population of the respective localities in which such estates are situated. All figures have been revised up to date but at the present stage of the operations cannot be regarded as final, though they may be found useful for all practical purposes as very little variation is expected in them when finalised.

The following explanatory notes and comments are appended in the belief that they may prove of assistance in arriving at some tentative conclusions from the results now published :—

Column 1.—The smallest unit for which figures are given in the Table is a Census Circle. In most rural areas, this corresponded with what is administratively known as a "Superior Headman's Division", i.e., a Vidane Arachchi's Division in the Low-country, a Korala's Division in the Kandyan Districts, and an Udayar's Division in the Tamil Districts. In certain areas, however, groups of contiguous Village Headmen's Divisions within a Chief Headman's or D. R. O.'s Division were formed into Census Circles, and in such cases the administrative numbers of the Village Headmen's Divisions are given in this column. The names of villages included in each Village Headman's Division are given in the Appendix to facilitate identification.

Column 2.—The total population (exclusive of Services and Shipping) on March 19, 1946, as recorded on the Enumerators' abstracts received from the Commissioners is given in this column. The following summary gives the excess or deficiency for each Revenue District (inclusive of Municipalities and Urban Council areas) over the provisional figures transmitted by telephone or telegraph by the Commissioners and published in the *Government Gazette* of March 23, 1946 :—

Apart from a few errors in transmission, the discrepancies are attributable to the fact that Preliminary Census figures or estimates were included in the provisional totals for census units which had failed to send the final census figures in time. This was the case especially in districts where communications were difficult or where a highly migratory population like the estate population formed an important element. The fact that in no district has there been any considerable discrepancy—the greatest variation being no more than 5.3 per cent.—reflects great credit on the celerity and care with which the Commissioners of Census worked out the arrangements for the collection and transmission of the provisional figures. Special mention must be made of the commendable promptness with which the final census figures of all the estates in Kalutara District were received at the Kachcheri by the Assistant Government Agent. In the aggregate for the Island, the discrepancy is but one-fourth of one per cent. of the original total.

The Registrar-General's estimate of the population as at December 31, 1945, which was referred to in my broadcast talk on March 23, 1946, has also been since revised, and the corrected figure is 6,587,043. On the basis of this figure, the population of the Island as on March 19, 1946, is estimated at 6,605,741, which approximates to 99 per cent. of the revised figure now published. The Food Controller's figures which were also referred to in the broadcast talk cannot, of course, have a like statistical significance as they are subject to errors common to rationing schemes in all countries such as are due to the mobility of the population, and had not been revised with reference to the surrender of deceased persons' ration books, the segregation of ration books of persons temporarily absent in India, or the inclusion in the figures quoted, of estate token cards which had not been verified with the Food Controller's enumeration.

Column 3.—In this column is given the number of persons who were found on the night of March 19, 1946, at places other than their place of enumeration at the Preliminary Census. It has not been practicable, at the present stage, to tally the records made on that night in respect of these persons with the full records made for them at the Preliminary Census, but as the aggregate of "unclassified" persons for the Island is only 2.2 per cent. it has not been deemed necessary to defer publication of the detailed statistics until all the records have been tallied. It is expected that much of the mobility occurring between the Preliminary Census and the date of the Final Census is confined to the revenue districts.

Column 4 gives the total population classified in this Table. The number so classified represents 97.8 of the aggregate population of the Island.

Columns 5 to 8.—From these columns may be derived the masculinity of the population of Ceylon. While in most countries of Western Europe there is an excess of females over males, in the East the opposite is more often the case. The figures obtained in Ceylon for 1946 on the basis of the classified population are 525 males and 475 females in every 1,000 persons. The corresponding figures for previous census years are:—

Census year.	Masculinity in Ceylon.
1871 ..	533
1881 ..	532
1891 ..	530
1901 ..	532
1911 ..	530
1921 ..	529

It is possible that the fall in masculinity in 1946 is due to the better enumeration of females. The subject may also be examined, as is generally done, by calculating the males per 1,000 females. The figure obtained for Ceylon in 1946 on this calculation is 1,105 males per 1,000 females. In India, at the census of 1941, there were 1,069 males per 1,000 females. In Canada, at the census of 1941, the proportion was 1,052 males per 1,000 females, while in Jamaica, at the census of 1943, there were 937 males per 1,000 females. It is interesting in this connexion to note that it is only in the Northern Province that the females exceed the males. The "child" population in the Northern Province, however, is almost equally distributed between the sexes.

Columns 9 to 13 give the distribution by the four principal religions, Buddhism, Hinduism, Islam and Christianity. The percentage proportions of the followers of these four religions to the total classified population in 1946 are as given below:—

All religions	100.0
Buddhists	64.4
Hindus	19.9
Muslims	6.5
Christians	9.1
Others	0.1

Columns 14 to 22 classify the population by race. The distinction between the Low-country Sinhalese and the Kandyan Sinhalese, first made at a census in 1901, was maintained at the census of 1946. A similar distinction between Ceylon and Indian Tamils, first made at the census of 1911, was also maintained. To inquiries as to how the differentiation was to be drawn the reply was given that stock, and not birthplace, determined race. The Indians are sub-divided in the classification into Indian Tamils, Indian Moors, and other Indians. The figures for Ceylon Moors and Malays are separately given, but it has not been found feasible to carry the analysis further at the present stage. The other races have accordingly been grouped together. The percentage distribution of the races on the basis of the total classified population in 1946 is as follows:—

All races		100·0
Sinhalese		69·6
(i.) Low-country	43·5	
(ii.) Kandyan	26·1	
Tamil		22·7
(i.) Ceylon	12·4	
(ii.) Indian	10·3	
Moors		6·1
(i.) Ceylon	5·5	
(ii.) Indian	0·6	
Malays		0·4
Indians (other than Tamils or Moors)		0·5
Other Races		0·7
