Box 352, Colombo (5) Class: 2 (6) Goods: Chemical substances used for agricultural and horticultural purposes (7) Representation of the Trade Mark:

#### HORTOMONE

Registrar-General's Office, R M DAVIES,  
Colombo, January 31, 1949 Registrar of Trade Marks.

#### NOTIFICATIONS UNDER "THE PATENTS ORDINANCE, 1906."

THE following specifications have been accepted —  
No. 3,528 of February 17, 1948.

Axel Frokgaer-Jensen.

"Improvements in and relating to reinforcing steel and a method for the production of the same."

**Abstract** — Cold treatment of steel, such as twisting increases the strength, but at the expense of elongation. However, by the employment of alloys containing elements which form mixed crystals with iron, e.g., silicon, manganese, &c., it is possible to increase both the elongation as well as resistance to fatigue. According to another feature of the invention, the steel is subjected to stretching followed by twisting or by stretching combined with twisting such that the bar acquires a permanent elongation equal to the elongation of the yield point. The steel may be heat treated to improve its structure.

The carbon content of the steel should be less than 30% and it should have either a silicon content of .1 to 1.5% and a manganese content of 5% to 15% or a silicon and manganese content totalling 6 to 20%.

There are 9 claims.

No 3,529 of February 25, 1948 (Date applied for under Section 48 of the Ordinance, September 5, 1947)

Wingfoot Corporation

"Method of stabilising rubber latex."

**Abstract**—The object of the invention is to effect a saving in the amount of stabilising agent used in creaming rubber latex. According to the invention, to the latex is added an amount of stabilising agent insufficient to maintain the latex in stable form throughout the creaming operation and after a lapse of time less than that required to obtain the desired concentration, the separated serum is drawn out, finally more stabilising agent is added and the creaming operation completed. The inventors state the amount of stabilising agent saved is from  $\frac{1}{4}$  to  $\frac{1}{2}$  of what would ordinarily have been used.

There are 3 claims.

No 3,530 of February 25, 1948 (Date applied for under Section 46 of the Ordinance, January 8, 1942)

Checcol (Holdings) Limited

"Improvements in or relating to concrete"

**Abstract**—The object of the invention is to form a satisfactory grout when coarse aggregate is placed *in situ*, and cement mixture is poured over it. It is found that the addition of between 0.01% and 0.5% (preferably of 0.1%) of a sulphonated or sulphated higher alcohol whose calcium and magnesium salts are readily soluble in water, to the cement mix enables the grout to effectively enter the voids between the aggregate without any setting. No special mixers (such as colloidal mixers) need be used.

There are 9 claims.

R. H. PAUL,  
Registrar of Patents.

THE following specifications have been accepted —

No 3,531 of February 25, 1948

Imperial Chemical Industries Limited

"Manufacture of biguanide derivatives"

**Abstract**—The object of the invention can be ascertained from claim (1) which is as follows —

Process for the manufacture of biguanide derivatives which comprises subjecting a substance of the formula

wherein A represents a benzene nucleus which may optionally bear a halogen, lower alkyl or lower alkoxy substituent or substituents in position *meta* to the —NH— group, wherein X and Y represent hydrogen or lower alkyl radicals provided that both be not lower alkyl radicals at the same time, wherein R represents a lower alkyl radical, R' represents hydrogen or a lower alkyl radical and wherein R and R' together contain more than one and fewer than eight carbon atoms, to the action of halogenating agents

There are 3 claims

No 3,532 of March 5, 1948

M. Navaratnam

"A machine to transplant paddy seedlings under 'mud-land' conditions in muddy fields"

**Abstract**—The machine comprises a main roller in which are radially fixed stationary distributing pegs. There are also provided radial distributing pegs movable in a radial direction. One stationary peg and one moveable peg form a pair which are connected by "head pieces". Crank means actuate the moveable peg in such a way that when the head pieces are vertical pointing upwards they pick up the seedlings from the feeding boxes and grip them above the roots and when pointing downwards push the seedlings in the ground and release their hold. The pegs are arranged on the cylindrical roller so that as the drum rotates the seedlings are planted neatly in rows. A "drum roller" is used to support and carry the main roller as otherwise it will sink in the mud, and the whole mechanism is adjustably balanced so that it can be drawn by bullocks.

There are 8 claims and 5 sheets of drawings
