Registrar of Trade Marks.

## Notifications under "The Patents Ordinance, 1906"

THE following specifications have been accepted:—

No. 3,684 of November 4, 1949. (Date applied for under Section 48 of the Ordinance, November 5, 1948)

Imperial Chemical Industries, Limited.

"New Quinoline Derivatives"

*Abstract.*—This invention relates more particularly to a process for the manufacture of new di-quaternary salts of pyrimidylamino-quinolines which possess trypanocidal properties.

The said new compounds may be represented by the formula  $Pq-NH-Qq$  where Pq stands for a 2-, 4- (or 6-) amino or lower alkylamino-substituted pyrimidine nucleus which is attached to the linking  $-NH-$  group at another of the 2-, 4- (or 6-) positions and which may be further substituted in the remaining 2-, 4- (or 6-) position by a lower alkyl radical or an amino group or a lower alkylamino group, Q stands for a quinoline nucleus which is substituted in the 4- position by an amino group or a lower alkylamino group and which may be further substituted by a lower alkyl group or groups, and which bears the linking  $-NH-$  group in the 6- position provided that, if the 4-substituent of the quinoline nucleus be not lower alkylamino than the pyrimidine nucleus must bear a lower alkylamino substituent, and the symbols q indicate that the preceding nuclei are present in the form of their quaternary salts.

The process comprises in reacting one or more of the substances  $P-NH-Q$ ,  $Pq-NH-Q$  or  $P-NH-Qq$  with a quaternary salt forming agent, which reaction may take place in one or two stages. Suitable quaternary salt forming agents are methyl iodide, dimethyl sulphate and methyl p-toluene sulphate. The reaction is carried out by heating the reactants in a suitable solvent, examples of which are given.

There are 11 examples and 3 claims.

No. 3,685 of November 4, 1949. (Date applied for under Section 48 of the Ordinance, November 5, 1948)

Imperial Chemical Industries, Limited.

"Manufacture of Quinoline Derivatives."

*Abstract.*—This invention relates to the manufacture of quinoline derivatives, more particularly to the manufacture of di-quaternary salts of pyrimidylamino-quinolines possessing trypanocidal activity.

The compounds referred to are of the form  $Pq-NH-Qq$ —where P stands for a 2-amino or 2-lower alkylamino-substituted pyrimidine nucleus, which is attached to the linking  $-NH-$  group at the 4- position and which may be further substituted in the 6- position by a lower alkyl group, Q stands for a quinoline nucleus substituted in the 4- position by an amino or lower alkylamino-group and which may be further substituted by a lower alkyl group or groups and which bears the linking  $-NH-$  group in the 6- position and wherein the symbols q indicate that the preceding nuclei are present in the form of their quaternary salts. The reaction may be carried out by heating the reactants together in a liquid solvent in a closed vessel.

There are 13 examples and 3 claims.

No. 3,686 of November 4, 1949. (Date applied for under Section 48 of the Ordinance, November 5, 1948)

"New Cinnoline Derivatives."

*Abstract.*—This invention relates to new cinnoline derivatives and in particular to a process for the manufacture of the mono- and di-quaternary salts of pyrimidyl-aminocinnolines possessing trypanocidal activity.

The new compounds are of the formula  $Pq-NH-A$  where P stands for a 2-, 4- (or 6-) amino- or lower alkylamino-substituted pyrimidine nucleus attached to the linking  $-NH-$  group at another of the 2-, 4- (or 6-) positions and which may be further substituted in the remaining position by a lower alkyl radical, an amino group or a lower alkylamino group. A stands for Q or

Qq, where Q stands for a cinnoline nucleus which is substituted in the 4— position by an amino or lower alkylamino group and which may be further substituted by a lower alkyl group or groups and which bears the linking —NH— group in the 6— position and the symbols q indicate that the preceding nuclei are present in the form of their quaternary salts.

The process comprises of reacting a compound of the formula PqX where X stands for a halogen atom or the group —SR where R stands for a hydrocarbon radical with a compound of the formula NH<sub>2</sub>A. The reactants are heated together conveniently but not necessarily in a liquid medium such as water and in presence of an acid such as HCL.

There are 14 examples and 3 claims.

“New Cinnoline Derivatives.”

*Abstract.*—This invention relates to new cinnoline derivatives and to the manufacture of new di-quaternary salts of pyrimidylaminocinnolines possessing trypanocidal properties.

These new compounds have the general formula Pq—NH—Qq in which P stands for a 2—, 4— (or 6—) amino-or lower alkylamino-substituted pyrimidine nucleus attached to the linking —NH— group at another of the 2—, 4— (or 6—) positions and which may be further substituted in the remaining 2—, 4— (or 6—) position by a lower alkyl radical, an amino group, or a lower alkylamino group, Q stands for a cinnoline nucleus which is substituted in the 4— position by an amino group or a lower alkylamino group and which may be further substituted by a lower alkyl group or groups, and which bears the linking —NH— group in the 6— position and the symbols q indicate that the preceding nuclei are present in the form of their quaternary salts.

These compounds are made by reacting one or more of the substances P—NH—Q, Pq—NH—Q and P—NH—Qq with a quaternary salt-forming agent such as methyl iodide, dimethyl sulphate or methyl p—toluene sulphate by heating the reactants together in a solvent such as ethyl alcohol, acetomitrile or nitro-benzene. The reaction may take place in one or two stages.

There are 7 examples and 3 claims.
