Notifications under "The Patents Ordinance, 1906"

THE following specifications have been accepted.—
No 3,828 of June 27, 1951 (Date applied for under section 48 of the Ordinance, June 28, 1950)

S A FABBRICHE FORMENTI

"An improved profiled element for the frames of heddle carrying blades"

Abstract—This invention relates to metal elements for heddle carrying blades.

The profiled metal element is formed from a single metal sheet, at least some of the superposed surfaces of which are connected by welding, curling, riveting, screw members or other means.

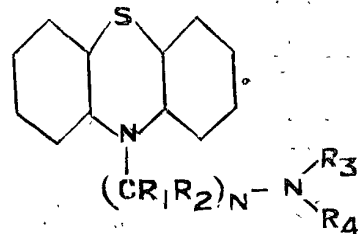

There are 6 claims and 1 sheet of drawing.

No 3,829 of June 27, 1951 (Date applied for under section 46 of the Ordinance, March 5, 1945).

Societe Des Usines Chimiques Rhone-Poulenc

"Process for the preparation of phentiazine derivatives"

Abstract.—This invention relates to improvements in the preparation of new phentiazine derivatives, especially new amino derivatives of the general formula,

where R_1 and R_2 are the same or are different and represent hydrogen atoms or alkyl groups, R_3 and R_4 represent alkyl groups and n is an integer greater than one. These amino derivatives are prepared by the action on phentiazine of a dialkylaminoalkyl halide in the presence of a halogen acid binding agent, preferably sodamide, the reaction being preferably effected at elevated temperature in the presence of an organic diluent.

The new compounds are said to possess a marked antidysponoic and anti-histaminic activity.

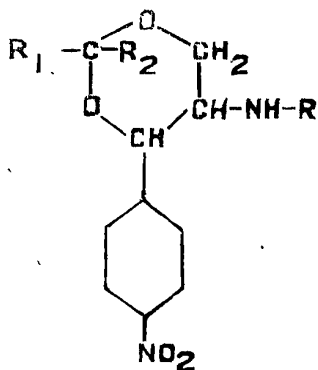

There are 6 examples and 5 claims.

No. 3,831 of July 2, 1951 (Date applied for under section 48 of the Ordinance, August 31, 1950)

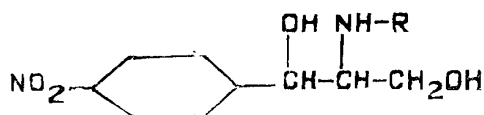

Parke Davis & Co

"Heterocyclic compounds and method for obtaining the same"

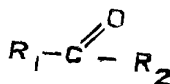

Abstract.—This invention relates to heterocyclic compounds possessing antibiotic properties—especially 1,3 dioxane compounds having the formula,

where R is a halogenated lower aliphatic carboxylic acid acyl radical and R₁ and R₂ are the same or different representing hydrogen, lower alkyl, phenyl or phenalkyl radicals. These compounds are produced by reacting a acylamido diol compound of the formula,

under anhydrous conditions in the presence of a dehydrating agent with a carbonyl compound of formula,

The conditions requisite for the reaction are stated There are 10 examples and 7 claims.

No. 3,832 of July 16, 1951 (Date applied for under section 46 of the Ordinance, January 8, 1948).

National Titanium Pigments Limited

"Improvements in the manufacture of titanium pigments"

Abstract.—This invention relates to the manufacture of titanium pigments.

The process consists of adding a partially hydrolysed nuclear titanium salt solution (as defined in the text of the specification) to a hot aqueous medium at least 70°C in temperature to produce a TiO₂ concentration not exceeding 100 grams per litre of the mixture. The aqueous medium contains a colloidal substance such as colloidal hydrous titanium dioxide, colloidal hydrous silicic acid, dextrin, gum tragacanth, gum arabic, gum karaya, carrageen moss or starch. The concentrations of colloid, &c., are specified. The hydrolysis is completed by heating the mixture and the hydrous titanium dioxide so obtained is calcined.

There are 6 examples and 9 claims

Patent Office,
Colombo, May 23, 1952

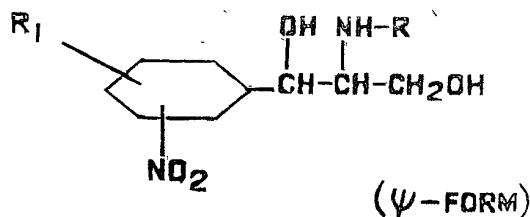

THE following specification have been accepted:—

No. 3,823 of June 11, 1951 (Date applied for under section 48 of the Ordinance, December 12, 1950).

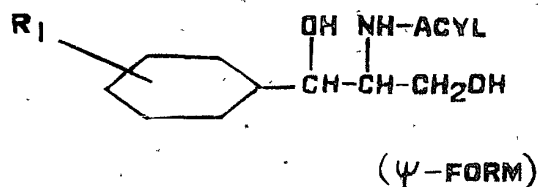

Parke, Davis & Company.

"Process for the production of nitrophenyl amino diol derivatives"

Abstract.—The invention relates to a process for the production of nitrophenyl amino diol derivatives. The products obtained by the invention are claimed to be antibiotics per se or are useful as intermediates for preparation of other compounds with antibiotic activity 1-nitrophenyl-2-aminopropane-1, 3-diol derivatives having the general formula,

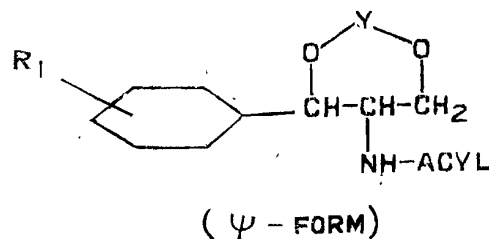

are produced by reacting a 1-phenyl-2-acylamido-propane-1, 3-diol compound of the formula

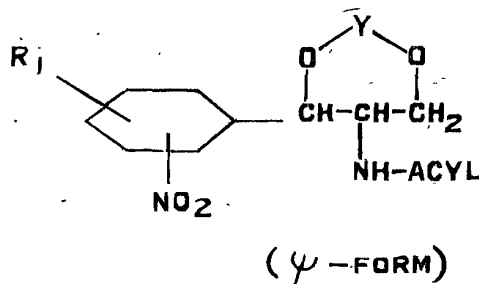

with a halide compound of formula,

to obtain a phenyl substituted cyclic compound of formula,

the phenyl ring of which is nitrated to obtain a nitrophenyl substituted cyclic compound of formula,

and hydrolysing the nitrophenyl substituted cyclic compound. R₁ as a hydrogen, halogen, a lower alkyl or a lower alkoxy radical; X is a halogen atom and Y is a -SO- or -CO-group.

Optimum conditions for the reactions are given. There are 11 examples and 14 claims

S L DE SILVA,
Registrar of Patents.

Patent Office,
Colombo, May 22, 1952.

THE following specifications have been accepted —

No. 3,824 of June 11, 1951 (Date applied for under section 48 of the Ordinance, June 19, 1950).

Tarpon Engineering Co., Ltd. & James Watt Ross & B. D. Fay

"Improvements in or relating to appliances for cutting and gathering leaves, grasses, herbs, and so forth"

Abstract.—This invention relates to appliances for cutting and gathering leaves, &c.

Its object is to provide a skid for an appliance as described in the parent specification No 3,494 whereby the appliance can be used for cutting a second crop after the first crop has been taken from the top of the bush.

There are 4 claims and 1 sheet of drawing

No. 3,825 of June 14, 1951 (Date applied for under section 46 of the Ordinance, April 23, 1948)

Roche Products Ltd

"Process for increasing the vitamin and mineral content of cereal grains"

Abstract.—This invention relates to a process for increasing the vitamin and mineral content of cereal grains.

It consists in impregnating the cereal grains with a solution containing vitamins and mineral substances and coating the impregnated grains with an edible film forming agent, an adhesive agent and a plasticizer, which coating is insoluble in cold water but removable in hot water

It is advantageous to use as protective coating a mixture containing corn protein, such as zein, as a film forming ingredient. Abietic acid can be used to impart adhesiveness while a higher fatty acid such as palmitic or stearic may be used as a plasticizing agent.

There are 3 examples and 8 claims.

No 3,826 of June 22, 1951

General Andine & Film Corporation

"Improvements in or relating to detoxified halogen containing pharmaceutical products and method of preparing same"

Abstract.—This invention relates to compositions containing halogens and polymeric N-vinyl pyrrolidone

This relates to the combination of known halogen compounds having bactericidal, therapeutic or diagnostic uses with polyvinyl pyrrolidone. Such combinations are claimed to have less toxicity and substantially less irritation and sensitization effects than the halogen compounds per se. In many cases they show a synergistic effect. Water soluble polymers of N-vinyl pyrrolidone as a class are effective in the compositions of this invention and the degree of polymerisation has no apparent effect on its detoxifying action. The possibilities of the use of this invention in medicine, &c. are described.

There are 10 claims.

S. L. DE SILVA,
Registrar of Patents.

Patent Office,
Colombo, May 28, 1952.

THE following specifications have been accepted —

No 3,833 of July 19, 1951 (Date applied for under section 46 of the Ordinance, October 21, 1946).

Union Francaise Commerciale Et Industrielle

"Improvements in or relating to the continuous production of soap"

Abstract.—This invention relates to processes for the continuous production of soap.

A water-in-oil type of emulsion is just formed between a glyceride or mixture of glycerides at a temperature slightly above its melting point and an alkaline lye. The emulsion is homogenised and passed through a saponification chamber where neat soap is formed. The concentration of lye has to be suitably adjusted. Saponification is initiated by the momentary application of heat at a point near entrance to chamber. Once started, the saponification proceeds without application of any external heat

There are 14 claims and 1 sheet of drawing.

No 3,834 of July 28, 1951 (Date applied for under section 48 of the Ordinance, July 31, 1950).

Aktiebolaget Bofors.

"Choked rifled barrel"

Abstract.—This invention relates to modern artillery weapons. According to the invention, the barrel for fire arms with rifles to guide the projectiles has the calibre from the commencement of the rifling to the muzzle constant and the rifle diameter decreasing from the commencement of rifling or from a point between the commencement of rifling and the muzzle along the barrel to the muzzle.

There are 2 claims and 1 sheet of drawing

No 3,836 of August 7, 1951 (Date applied for under section 46 of the Ordinance, December 29, 1947).

J. R. GEIGY A-G

"Manufacture of insecticidal solutions"

Abstract.—This invention which relates to the manufacture of insecticidal solutions comprises the use of dichlorodiphenyltrichlorethane. This insecticidal ingredient is dissolved in kerosene (paraffin oil) or another spray oil solvent. Other substances which are fungicidal, bactericidal or insecticidal may also be added to such solutions.

There are 5 claims and 1 example
