THE following specification has been accepted —

No. 4,225 of April 30, 1955

Horace James Hoare & Hoare & Co (Engineers) Ltd
"Improvements in and relating to Drying Machines or Drying Machine Chambers".

Abstract.—According to the present invention the drying chamber is not stationary or horizontal or rectangular. It is preferably cylindrical in form and circular on plan. It may also be a polygon on plan. It revolves slowly carrying with it that portion of the drying apparatus contained within it and secured to its outer shell. By this means internal endless chains and other elaborate fittings are dispensed with and it is claimed that heat losses by conduction at the base are eliminated.

There are 39 claims and 3 sheets of drawings
