Trade Mark Notices

Trade Marks Office

All communications relating to Trade Marks should be addressed to the Registrar of Trade Marks, Department of the Registrar of Companies, Block 5, Echelon Square, Colombo 1.

Hours of Inspection

The office shall be open to the public every week day except Saturday, between the hours of ten to four, and on Saturdays between the hours of ten to one, except on public holidays. Applications for inspections will, however, be accepted up to 3 p.m. on week days and 12 noon on Saturdays.

Trade Marks limited to colours

Where it is stated in the advertisement of an application that the mark upon its registration is to be limited to

certain colours, the colours are, as far as possible, indicated in the accompanying representation of the mark in the usual heraldic manner.

Association

Where it is stated that an advertised mark is to be associated (under Section 22 of the Trade Marks Ordinance (Cap. 121)) with another mark, it is indicated by its official number.

Applications in Part A or Part B

Applications for registration in Part A of the Register are shown with the official number unaccompanied by any letter. Applications for Part B of the Register are distinguished by the letter B prefixed to the official number.

OPPOSITION

NOTICE is hereby given that any person who has grounds of objection to the registration of the following trade marks may, within two months from the date of this Gazette, lodge notice of Opposition on form T. M. No. 7 bearing an uncancelled or impressed stamp of Rs. 25. The period of lodging Notice of Opposition may be enlarged by the Registrar if he thinks fit and upon such terms as he may direct.

Formal opposition should not be lodged until after reasonable notice has been given by letter to the Applicant for registration so as to afford him an opportunity of withdrawing his application before the expense of preparing the Notice of Opposition is incurred. Failure to give such notice will be taken into account in considering any application by an Opponent for an Order of Costs if the opposition is uncontested by the Applicant.

Notifications under the Patents Ordinance

NOTICE

The following specification has been accepted:—

No. 4,734 of 7th November, 1959. (Convention application under section 48, claiming priority date 7.11.58 of Union of South Africa No. 3,974).

JAN FRANS HENRI CUSTERS, HENRY BROOKE DYER, BERNARD WILFRED SENIOR and PETER THEO WEDEPOHL.

“The synthesis of diamonds”.

Abstract.—The nature of the invention can be ascertained from claim 1 which reads as follows:—

1. A process for making diamonds which consists in forming, by simultaneous application of pressure and heat, a saturated solution of atomic carbon in a solvent that is characterized by

incapacity to form with carbon a compound thermodynamically more stable than diamond in the zone above the equilibrium line of diamond-graphite in the pressure-temperature phase diagram of carbon appropriate to pressure and heat applied; causing or allowing the solution to become supersaturated while part at least of it is in that zone and thereby causing the excess carbon atoms to crystallize out of the solution or that part of it which is in that zone, in the form of diamond; and, after diamond formation, lowering the temperature and pressure to approximately atmospheric without causing reversion, to a detectable amount, of diamond into graphite, and without oxidation of diamond by exposure to air while the diamond is at a temperature above about 600°C.

There are 17 claims and 1 phase diagram.

“Process for the preparation of N-Alkylamides of O, O-Dimethyldit phosphorylacetic Acid”

Abstract.—This invention relates to the preparation of the N-monomethylamide of O, O-dimethyldithiophosphorylacetic acid having the following formula:—

The process according to the invention consists of reacting at low temperature (within the range -60°C to 20°C) the methyl Ester of the O, O-dimethyldithiophosphorylacetic acid with Methyl Amine. The process is carried out in the presence of an inert liquid capable of dissolving one or both reactants.

There are 7 examples and 7 claims.

GENERAL FOODS CORPORATION.

"Process for preparing an edible coconut product".

Abstract.—The nature of the invention can be ascertained from claim 1 which reads as follows:—

1. The process for preparing an edible coconut product characterized by an extended storage life which comprises contacting the meat of the inner surface of the nut endosperm with calcium and sulfur dioxide.

There are 5 examples and 9 claims.

No. 4,757 of 28th January, 1960 (Convention application under Sec. 48 claiming priority date January 29, 1959 of U. K. No. 3,258)

MAURICE GEOFFREY WOODS.

"Improvements in and relating to drying of particulate material".

Abstract.—The nature of the invention can be ascertained from claims 1 and 2 which reads as follows:—

1. Apparatus for the drying of partial drying of particulate material in which the material is held in or passed stepwise or continuously through a drying chamber provided with means enabling air at a controlled speed, temperature and humidity to be passed through a layer or layers of the material in a direction which can be varied.

2. Apparatus according to claim 1 in which the material is carried in a relatively thin horizontal layer on a conveyor which moves continuously during the drying operation and the air current is directed substantially horizontally in countercurrent to the direction of movement of the conveyor.

There are 18 claims and 2 sheets of drawing.

"Improvements relating to pneumatic vehicle wheel tyres."

Abstract.—The nature of the invention can be ascertained from claim 1 which reads as follows:—

1. A pneumatic vehicle wheel tyre with a replaceable tread, said tyre comprising a casing unit and a tread unit detachably mounted thereon, said tread unit having a smooth inner periphery and consisting of a substantially cylindrical ring of rubber interiorly reinforced in a stratum of the ring near the inner periphery thereof with at least two superposed plies of substantially inextensible strands laid parallel or nearly parallel to the mid-circumferential line of the tyre whereby the ring is rendered substantially inextensible circumferentially; said casing unit carrying on the outer periphery thereof a smooth seating for the tread unit and having a flattened cross-section when in the non-inflated condition and an external diameter at said seating when in said condition which is substantially equal to the internal diameter of the tread unit; said casing unit consisting as regards the carcass portion thereof of at least one layer of substantially inextensible strands laid in the layer in planes which are substantially radial to the tyre and contain the rotational axis of the tyre; said strands of said ring and similarly said strands of said carcass portion being embedded in a matrix of rubber completely separating them from one another, and the arrangement being such that (a) the inflation pressure of the tyre is effective to maintain the tread unit in non-slip engagement with the casing unit and (b) by reason of the radial-plane disposition of the casing unit strands said casing unit, as regards a layer thereof in the immediate neighbourhood of the tread unit seating, is yieldable longitudinally of said seating so as elastically to move as one with the tread unit as the latter moves under the working stresses in the tyre, thus eliminating all creeping of the tread unit relatively to the casing unit in spite of the absence of any form of circumferential anchorage between the two.

There are 5 claims and 1 sheet of drawings.

MENARINI, SOCIETE EN COMMANDITE SIMPLE.

"Furyl-2-Alkyl-Ketone Isonicotinyl-Hydrazones and Process for preparing the same."

Abstract.—The nature of the invention can be ascertained from the two claims which read as follows:—

1. As new industrial products, the furyl-2-alkyl-ketone isonicotinyl-hydrazones, particularly furyl-2-methyl-ketone isonicotinyl-hydrazone, furyl-2-ethyl-ketone isonicotinyl-hydrazone, furyl-2-propyl-ketone isonicotinyl-hydrazone, furyl-2-butyl-ketone isonicotinyl-hydrazone and furyl-2-amyl-ketone isonicotinyl-hydrazone.

2. Process for preparing new furyl-2-alkyl-ketone isonicotinyl-hydrazones, and particularly furyl-2-methyl-ketone isonicotinyl-hydrazone, furyl-2-ethyl-ketone isonicotinyl-hydrazone, furyl-2-propyl-ketone isonicotinyl-hydrazone, furyl-2-butyl-ketone isonicotinyl-hydrazone, and furyl-2-amyl-ketone isonicotinyl-hydrazone,
