Trade Mark Notices

Trade Marks Office

All communications relating to Trade marks should be addressed to the Registrar of Trade marks, Department of the Registrar of Companies, Block B, Echelon Square, Colombo 1.

Hours of Inspection

The office shall be open to the public every week day except Saturday, between the hours of ten to four, and on Saturdays between the hours of ten to one, except on public holidays. Applications for inspections will, however, be accepted up to 3 p.m. on week days and 12 noon on Saturdays.

Trade Marks limited to Colours

Where it is stated in the advertisement of an application that the mark upon its registration is to be limited to

certain colours, the colours are, as far as possible, indicated in the accompanying representation of the mark in the usual heraldic manner.

Association

Where it is stated that an advertised mark is to be associated (under Section 22 of the Trade Marks Ordinance (Cap. 121)) with another mark, it is indicated by its official number.

Applications in Part A or Part B

Applications for registration in Part A of the Register are shown with the official number unaccompanied by any letter. Applications for Part B of the Register are distinguished by the letter B prefixed to the official numbers.

IMPORTANT NOTICE

IT is hereby notified that in view of the Public Holiday on Thursday, January 20, 1966, all Notices and Advertisements for publication in the Ceylon Government Gazette of January 21, 1966, should reach the Government Press not later than 3.30 p.m. on Sunday, January 16, 1966.

Government Press,
Colombo, January 7, 1966.

BERNARD de SILVA,
Government Printer.

OPPOSITION

NOTICE is hereby given that any person who has grounds of objection to the registration of the following trade mark may, within two months from the date of this Gazette, lodge Notice of Opposition on form T. M. No. 7 bearing an uncancelled or impressed stamp of Rs. 25. The period of lodging Notice of Opposition may be enlarged by the Registrar if he thinks fit and upon such terms as he may direct.

Formal opposition should not be lodged until after reasonable notice has been given by letter to the Applicant or registration so as to afford him an opportunity of withdrawing his application before the expense of preparing the Notice of Opposition is incurred. Failure to give such notice will be taken into account in considering any application by an Opponent for an Order of Costs if the opposition is uncancelled by the Applicant.

Notifications under the Patents Ordinance

NOTICE

THE following specification has been accepted:—
No. 5,369 of 29th January, 1964.

MAURICE GERARD DE SAN.

"Process and Equipment for the Treatment of Fermenting Tea Leaves".

Abstract.—A process and apparatus for the treatment of tea leaves in the course of fermentation is described. The process is characterized by the fermenting tea leaves being rapidly raised to a temperature of about 100°C. by contact with steam which is passed across a layer of tea leaves alternately from below upwards and from above downwards by a suitable arrangement of baffle plates. The apparatus consists essentially of a steam generator, a movable support designed to receive the leaves which passes through a container into which the steam is passed at one end and withdrawn at the other, and a condenser. The steam after contacting the leaves is condensed and the volatile tea oils are thereby recovered.

There are 10 claims and 1 sheet of drawings.

MINISTERUL INDUSTRIEI PETROLULUI SI CHIMIEI.

"Method for Selective Conversion of Naphtha Boiling Range Hydrocarbons".

Abstract.—The nature of the invention can be ascertained from claim 1 which reads as follows:—

1. A method for selective conversion of naphtha hydrocarbons characterized by the fact that the feedstock, with a predominant hydrocarbon content of naphthene and paraffin series from the naphtha boiling range, is subjected to fractionation before the conversion, in which an overhead fraction is produced including light hydrocarbons up to the 5 carbon atoms inclusive, a middle fraction that contains hydrocarbons from 6 to 10 carbon atoms, and a bottom fraction containing hydrocarbons with over 10 carbon atoms, that subsequently are subjected separately to conversion, hydrogenation and reforming operations, thermally and catalytically in order to obtain high aromatic content products and high octane fuels.

There are 4 claims and one sheet of drawing.

SOCIETE INDUSTRIELLE ET COMMERCIALE DES SALINS DU MIDI.

"Process for Washing and Industrial Purification of Crystalline Substances Having Impurities".

Abstract.—The nature of the invention can be ascertained from claim 1 which reads as follows:—

1. Process for washing and industrial purification of crystalline substances emanating either from mineral layers or from evaporation systems, the said process consisting of:

(a) In the first phase treating by centrifugal separation the crystalline substances of evaporation systems and which are accompanied by their mother liquids, the said centrifugal separation eliminating with the resultant brine one part of the insolubles and certain slightly soluble impurities in suspension;

(b) In the second phase to mix the product obtained by the first phase with a liquid in which it is insoluble and to treat this mixture successively by a thickening separator, for example of the cyclone type, and then by centrifugal separation, the first of these two operations eliminating, with one part of the liquid, quasi-totally, the rest of the insolubles and the impurities in suspension, and the second of these two operations eliminating totally with the rest of the liquid the insolubles and the impurities in suspension.

There are 11 claims and 2 sheets of drawings.

ALUMINIUM LABORATORIES LIMITED.

"Method for determining composition of fused salt mixture".

Abstract.—The nature of the invention can be ascertained from claim 1 which reads as follows:—

1. A method of measuring the composition of a molten salt mixture including an alkali metal salt and a salt of a less electronegative metal comprising interposing said mixture between a first electrode and one side of a glass membrane, across which ions of said alkali metal may be transported, providing a second electrode in electrical connection with the other side of the glass membrane, measuring the potential between said two electrodes at an ascertained temperature and comparing said potential against a calibration curve obtained by measuring the potential obtained at said ascertained temperature with mixture of said two salts in known proportions.

There are 16 claims and 2 sheets of drawings.

"Improvements in or relating to subhalide distillation process for the recovery of aluminium".

Abstract.—The nature of the invention can be ascertained from claim 1 which reads as follows:—

1. A process for the recovery of aluminium from aluminium-containing metal in which said aluminium-containing metal is treated with a stream of aluminium trihalide at a temperature above 1000°C. to generate gaseous aluminium monohalide, which is decomposed by cooling to liberate aluminium metal characterised in that the gaseous aluminium monohalide is decomposed by cooling in a cooled fluidized bed of solid particles, which are inert in relation to the gaseous stream containing the aluminium monohalide and to molten aluminium.

There are 8 claims, 3 examples, 1 sheet of drawing.

"Production of Linear Ethylene Terephthalate Polyesters".

Abstract.—The nature of the invention can be ascertained from claim 1 which reads as follows:—

1. A process for producing linear ethylene terephthalate polyesters from terephthalic acid or the di-lower alkyl terephthalates and ethylene glycol, and optionally any other acid components and/or glycol components cocondensable therewith, in which at least 80 mol percent of the acid component of said polyesters is terephthaloyl groups and at least 80 mol percent of the glycol component is ethylene bisoxy groups, characterized in that said process, in at least its polycondensation stage, is effected in the presence of a catalytic amount of either titanium trichloride, ammonium orthotitanate or ammonium metatitanate.

There are 3 claims and 6 examples.
