Tables III., IV., and V. in the Appendix show the number of births and deaths registered in the several Provinces and districts of the Island and in the revenue subdivisions of those districts for the quarter under review, and their average for the corresponding quarters in the period 1898–1903. The birth-rates and death-rates for all ages and for infants in the several Provinces and districts of the Island are shown for the Sinhalese only in the districts which are mainly inhabited by the Sinhalese, and for Tamils only where Tamils form the bulk of the population. In the Puttalam and Batticaloa Districts, which contain a resident population composed of Sinhalese, Tamils, and Moors the rates are given for each of these races.

19. *Western Province.*—The Sinhalese inhabitants of this Province, who number over 800,000, enjoyed slightly better health than usual, the death-rate having fallen from an average of 18·9 to 18·5 in the quarter. Out of the three districts, Negombo and Kalutara fared better than usual, each of them showing a reduction in their death-rates (15·4 and 17·9 respectively) of nearly 2 per 1,000 below the average, while in the Colombo District the death-rate (19·8) was slightly above the average (19·0). Each of the three districts showed lower birth-rates than the average.

20. *Central Province.*—The Sinhalese inhabitants of this Province showed a death-rate of 26·6 during the quarter, a decline of 2·2 per 1,000 below the average 28·8. Each of the three districts enjoyed improved health, especially Matale District, which in the quarter (death-rate 27·3 as against the average 33·4) appears to have been almost as healthy as Kandy District (death-rate 27·2). Nuwara Eliya District, the healthiest in the Province, recorded a death-rate of 23·3 or more than 3 per 1,000 below the average 26·4.

21. *Northern Province.*—This Province was unhealthier than usual, the death-rate (for Tamils) in the quarter (26·3) being 2·1 per 1,000 higher than the average (24·2). Two of the districts, Jaffna and Mullaittivu, shared in the deterioration in health, the former with an increase in its death-rate (25·3) of 2·1 per 1,000 over the average and the latter (39·0) an increase of 6·5. Mannar District, on the other hand, appears to have enjoyed improved health, its death-rate (35·0) being 1·4 per 1,000 below the average 36·4. The healthiest district in the Province was as usual Jaffna, and the unhealthiest in the quarter, Mullaittivu (39·0).

22. *Southern Province.*—This Province appears to have enjoyed slightly better than normal health, the death-rate for Sinhalese (22·9) in the quarter being 2 per 1,000 below the average (23·1). This was entirely due to the improvement in health in the Galle District, where the death-rate (22·1) fell 2·3 per 1,000 below the average 24·4, while the Matara District fared slightly worse than usual, its death-rate (22·8) for the quarter showing a rise of 5 per 1,000 on the average 22·3, and the Hambantota District was considerably unhealthier than usual with a death-rate (25·0) 3·6 per 1,000 higher than the average 21·4.

23. *Eastern Province.*—In this Province the Tamils numbered 101,494 at the beginning of the quarter, the Moors 66,940, and the Sinhalese 8,925. Their death-rates for the quarter were 31·2, 27·7, and 28·0 respectively. In the Batticaloa District the Tamil death-rate for the quarter 29·5, and the Moor death-rate 28·5, both rose higher than the average 27·0 and 27·3 respectively. The Sinhalese, on the other hand, showed a much lower rate (28·4) in the quarter than the average 34·2. The Trincomalee District was much unhealthier than usual, its death-rate having risen 9 per 1,000 from an average of 30·5 to 39·5 in the quarter. This district showed the highest infantile death-rate in the Island, *viz.*, 396 per 1,000 registered births, a rate which is more than five times that recorded for Chilaw (71).

24. *North-Western Province.*—The returns of this Province show a marked improvement in health, the death-rate (22·2) having fallen 5·2 per 1,000 below the average (27·4), and is only half of the Provincial birth-rate (44·5). All its three districts shared in the improvement in health. In the Kurunegala and Puttalam Districts the death-rates fell to 24·1 and 24·7 respectively from their averages 30·0 and 27·0. In Chilaw District too, the healthiest in the Island in the quarter, and usually one of the healthiest in the Island, the death-rate (14·8) is about 3 per 1,000 below the average (17·9), which is less than half of the birth-rate (33·0). This district also showed by far the lowest infantile mortality rate in the Island, *viz.*, 71 per 1,000 registered births.

25. *North-Central Province.*—This Province was exceptionally healthy in the quarter under report, the death-rate being so low as 25·7 (as compared with its average 33·0), and appeared to have been healthier than the Central Province in the quarter, where the death-rate was 26·6. The birth-rate in the quarter was 42·4 as against the average 42·6.

26. *Province of Uva.*—Of the Sinhalese Provinces of the Island this was the only one which fared worse than usual in health. The death-rate increased to 38·9 from the average 37·5. Judging from the averages as well as the rates for the quarter under report, the Province of Uva appears to be the unhealthiest in the Island.

27. *Province of Sabaragamuwa.*—This Province enjoyed better health than usual, the death-rate having fallen to 24·5 from the average of 27·0. Both its districts contributed to this result. The Kegalla District was as usual the healthier of the two, and showed a reduction of more than 3 per 1,000 in its death-rate (22·5) as compared with the average 25·8. Ratnapura District also showed an improvement in health, its death-rate (27·1) being below the average (28·5).

The chief natural causes of death were diarrhoeal diseases, which caused 70 deaths. VII.—Health of the Town of Colombo.

47. The births registered in the town of Colombo numbered 897 and corresponded to a rate of 21·4 per mille per annum showing a slight improvement on the average 21·2.

48. The deaths registered numbered 1,388 and corresponded to a rate of 33·1, being slightly higher than the average 32·7.

49. As usual in the town the death-rate exceeded the birth-rate, due mainly to the preponderance of males over females (chiefly among the Europeans, Indian Tamils, and Mohammedans), to the presence of hospitals which add to the normal mortality of the town, and to registration of births being somewhat defective.

50. The subjoined Table E gives the births and deaths and their rates for each race in the third quarters of 1903 and 1904, and the average for the third quarters in 1898-1903 :—

51. Too much reliance should not be placed on the rates given in the above table for Europeans, Malays, and the races classed together as "Others," as their population is too small for purposes of rate calculation. Excluding the rates for these sections, the lowest death-rate was among the Burghers (25·5) as against an average of 26·3, followed by Tamils 26·7, a rate which shows a considerable improvement as compared with the average 35·6. All the remaining nationalities show higher death-rates than the average.

52. Europeans show the highest birth-rate (36·7), and Burghers the next (28·4). These are the only races whose birth-rate was higher than the death-rate. The low birth-rates for Tamils and "Others" are due to their population being composed chiefly of males.

53. The number of births and deaths in each ward of the town, their rates per mille per annum, the principal symptomatic causes of death, &c., during the quarter are shown in the following table F :—

54. The low birth- and death-rates of the Fort and Galle Face and the Pettah Wards are due to their population being chiefly a male adult one. Excluding these two wards, the healthiest division in the town was, as usual, Kollupitiya, with a death-rate of 20·6 per mille per annum. St. Paul's and St. Sebastian Wards, which came next in order, also show comparatively low death-rates in the quarter, viz., 22·6 and 22·9 respectively. The highest death-rate was in Maradana Ward (30·7), closely followed by Slave Island Ward (30·5).

55. There were no deaths in the town registered as due to cholera, smallpox, measles, or chickenpox.

56. Phthisis, bronchitis, and pneumonia were fatal in 346 cases (against 268 in the corresponding period of the last six years), diarrhoea and dysentery in 246 (average 246), fever in 107, including 43 of remittent fever (average 46), and 33 of enteric fever (average 29), infantile convulsions in 100 (average 107), debility in 96 (average 95), tetanus in 73 (average 42), old age in 54 (average 63), diseases of the circulatory system in 41 (average 27), enteritis in 41 (average 9), worms in 32 (average 21), apoplexy in 18 (average 12), puerperal fever in 18 (average 5), paralysis in 14 (average 12), dochmius duodenalis in 13 (average 14).

57. Ten deaths were attributed to accidents, of which 3 were by burns and scalds, 3 by drowning, 1 by gunshot wound, 2 by the fall of a heavy substance, and 1 by fall from a height.

58. Seven deaths were attributed to homicide and 1 to suicide (*i.e.*, by hanging).
